

build passing circleci passing

Meteor is an ultra-simple environment for building modern web applications.

With Meteor you write apps:

- in modern JavaScript
- that send data over the wire, rather than HTML
- using your choice of popular open-source libraries

Try a getting started tutorial:

- [React](#)
- [Blaze](#)
- [Vue](#)
- [Svelte](#)

Next, read the [documentation](#).

Are you looking for examples? Check this [meteor/examples](#).

Check your [changes](#) to keep your app up-to-date.

## Quick Start

On Linux/macOS/Windows, use this line:

```
npm install -g meteor
```

Visit the official [install page](#) to learn more.

Create a project:

```
meteor create my-app
```

Run it:

```
cd my-app  
meteor
```
