

box_syntax

The tracking issue for this feature is: [#49733](#)

See also `box_patterns`

Currently the only stable way to create a `Box` is via the `Box::new` method. Also it is not possible in stable Rust to destructure a `Box` in a match pattern. The unstable `box` keyword can be used to create a `Box`. An example usage would be:

```
#![feature(box_syntax)]
```

```
fn main() {  
    let b = box 5;  
}
```
