

This error indicates that the struct, enum or enum variant cannot be instantiated from outside of the defining crate as it has been marked as `non_exhaustive` and as such more fields/variants may be added in future that could cause adverse side effects for this code.

Erroneous code example:

```
“ignore (it only works cross-crate) #[non_exhaustive] pub struct NormalStruct  
{ pub first_field: u16, pub second_field: u16, }
```

```
let ns = NormalStruct { first_field: 640, second_field: 480 }; // error! “
```

It is recommended that you look for a `new` function or equivalent in the crate's documentation.
