

This page contains links to some examples of existing `binding.gyp` files that other node modules are using. Take a look at them for inspiration.

To add to this page, just add the link to the project's `binding.gyp` file below:

- `ons`
- `thmclrx`
- `libxmljs`
- `node-buffertools`
- `node-canvas`
- `node-ffi` + `libffi`
- `node-time`
- `node-sass` + `libsass`
- `node-serialport`
- `node-weak`
- `pty.js`
- `ref`
- `appjs`
- `nwm`
- `bcrypt`
- `nk-mysql`
- `nk-xrm-installer` + `includable.gypi` + `unpack.py` + `disburse.py` .py files above provide complete reference for examples of fetching source via http, extracting, and moving files.
- `node-memwatch`
- `node-ip2location`
- `node-midi`
- `node-sqlite3` + `libsqlite3`
- `node-zipfile`
- `node-mapnik`
- `node-inotify`
- `v8-profiler`
- `airtunes`
- `node-fann`
- `node-talib`
- `node-leveldown` + `leveldb.gyp` + `snappy.gyp`
- `node-expat` + `libexpat`
- `node-openvg-canvas` + `node-openvg`
- `node-cryptopp`
- `topcube`
- `node-osmium`
- `node-osrm`
- `node-oracle`
- `node-process-list`
- `node-nanomsg`
- `Ghostscript4JS`
- `nodecv`

- magick-cli
- sharp
- krb5
- node-heapdump
