

A pattern was declared as an argument in a foreign function declaration.

Erroneous code example:

```
extern "C" {  
    fn foo((a, b): (u32, u32)); // error: patterns aren't allowed in foreign  
                                // function declarations  
}
```

To fix this error, replace the pattern argument with a regular one. Example:

```
struct SomeStruct {  
    a: u32,  
    b: u32,  
}  
  
extern "C" {  
    fn foo(s: SomeStruct); // ok!  
}
```

Or:

```
extern "C" {  
    fn foo(a: (u32, u32)); // ok!  
}
```
