## Puppeteer.registerCustomQueryHandler() method

Registers a [custom query handler](#). After registration, the handler can be used everywhere where a selector is expected by prepending the selection string with `<name>/`. The name is only allowed to consist of lower- and upper case latin letters.

### Signature:

```
registerCustomQueryHandler(name: string, queryHandler: CustomQueryHandler): void;
```

### Parameters

Parameter	Type	Description
name	string	The name that the custom query handler will be registered under.
queryHandler	<a href="#">CustomQueryHandler</a>	The <a href="#">custom query handler</a> to register.

### Returns:

void

### Example

```
puppeteer.registerCustomQueryHandler('text', { ... });  
const aHandle = await page.$('text/...');
```
