

The `Copy` trait was implemented on a type with a `Drop` implementation.

Erroneous code example:

```
#[derive(Copy)]
struct Foo; // error!

impl Drop for Foo {
    fn drop(&mut self) {
    }
}
```

Explicitly implementing both `Drop` and `Copy` trait on a type is currently disallowed. This feature can make some sense in theory, but the current implementation is incorrect and can lead to memory unsafety (see issue [#20126](#)), so it has been disabled for now.
