

pip plugin

This plugin adds completion for [pip](#), the Python package manager.

To use it, add `pip` to the plugins array in your `zshrc` file:

```
plugins=(... pip)
```

pip cache

The pip plugin caches the names of available pip packages from the PyPI index. To trigger the caching process, try to complete `pip install`, or you can run `zsh-pip-cache-packages` directly.

To reset the cache, run `zsh-pip-clear-cache` and it will be rebuilt next the next time you autocomplete `pip install`.

Aliases

| Alias | Description |
|----------|--|
| pipreq | Create requirements file |
| pipir | Install packages from <code>requirements.txt</code> file |
| pipupall | Update all installed packages |
| pipunall | Uninstall all installed packages |
