

End to End Tests

These are end to end tests triggered via a CI job. You can run these tests locally by following the [instructions below](#) and they're automatically run as part of a CI workflow which runs when the *packages/* or *e2e-tests/* directory is changed in a commit.

Adding a new e2e test

- Create a folder `e2e-tests/name-of-the-test`
- Copy structure from an existing test, e.g. [e2e-tests/path-prefix](#)
- Add your tests in `e2e-tests/name-of-the-test/cypress/integration/your-test-here.js`

Running the Tests

- `cd` to the test (e.g. `cd e2e-tests/gatsby-image`)
- Install dependencies: `yarn` or `npm install`
- OPTIONAL: Use [gatsby-dev-cli](#) to link current changes in packages
- Run the `test` script, e.g. `yarn test` or `npm test`

Alternatively you can do what the CI does:

- From the gatsby root run `./scripts/e2e-test.sh "e2e-tests/gatsby-image" "yarn test"`
- The script uses `sudo` to install `-g gatsby-cli`. You won't need to and you can `ctrl+c` the prompt away

Thanks for contributing to Gatsby! ❤️
