

## zh-CN

List `grid` 在各种情况下的样式表现，如 Fragment 和封装了 List.Item.

## en-US

Test List `grid` for some edge cases.

```
import { List, Card } from 'antd';

const data = [
  {
    title: 'Title 1',
  },
  {
    title: 'Title 2',
  },
  {
    title: 'Title 3',
  },
  {
    title: 'Title 4',
  },
  {
    title: 'Title 5',
  },
  {
    title: 'Title 6',
  },
];

const ListItem = () => (
  <List.Item>
    <Card title="title">Card content</Card>
  </List.Item>
);

export default () => (
  <>
    <List
      grid={{ gutter: 16, column: 4 }}
      dataSource={data}
      renderItem={item => (
        <List.Item>
          <Card title={item.title}>Card content</Card>
        </List.Item>
      )}
    />
    <List grid={{ gutter: 16, column: 4 }} dataSource={data} renderItem={() =>
      <ListItem />
    } />
  </>
);
```

```
grid={{ gutter: 16, column: 4 }}
dataSource={data}
renderItem={() => (
  <>
    <ListItem />
    <div />
  </>
)}
/>
</>
);
```
