

Multiple candidate files were found for an out-of-line module.

Erroneous code example:

```
““ignore (Multiple source files are required for compile_fail.) // file: ambiguous_module/mod.rs
```

```
fn foo() {}
```

```
// file: ambiguous_module.rs
```

```
fn foo() {}
```

```
// file: lib.rs
```

```
mod ambiguous_module; // error: file for module ambiguous_module // found  
at both ambiguous_module.rs and // ambiguous_module.rs/mod.rs ““
```

Please remove this ambiguity by deleting/renaming one of the candidate files.
