

zh-CN

`value` 和 `onChange` 需要配合使用。

en-US

`value` and `onChange` should be used together,

```
import React, { useState } from 'react';
import { TimePicker } from 'antd';

const Demo = () => {
  const [value, setValue] = useState(null);

  const onChange = time => {
    setValue(time);
  };

  return <TimePicker value={value} onChange={onChange} />;
};

export default () => <Demo />;
```
