

Missing `loader` Prop on `next/image`

Why This Error Occurred

When using the `next/image` component with `loader="custom"` in `next.config.js`, you must provide the `loader` prop to the component with your custom implementation.

Possible Ways to Fix It

- Add the `loader` prop to all usages of the `next/image` component.
- Change the `loader` configuration in `next.config.js`.
