

Website

This website is built using Docusaurus 2, a modern static website generator.

Its dependencies are purposefully kept separate from the main Puppeteer code-base's in order to avoid having all our end users install them when installing Puppeteer. In the future we may move this website into its own repository.

Installation

```
npm install
```

Local Development

```
npm start
```

This command starts a local development server and opens up a browser window. Most changes are reflected live without having to restart the server.

Build

```
npm build
```

This command generates static content into the `build` directory and can be served using any static contents hosting service.

Deployment

Deploys are automatically handled by the `deploy-docs.yml` workflow.
