

The documentation in this tree is in plain text files and can be viewed using any text file viewer.

It uses [ReST](#) (reStructuredText), and the [Sphinx](#) documentation system. This allows it to be built into other forms for easier viewing and browsing.

To create an HTML version of the docs:

- Install Sphinx (using `python -m pip install Sphinx` or some other method).
- In this docs/ directory, type `make html` (or `make.bat html` on Windows) at a shell prompt.

The documentation in `_build/html/index.html` can then be viewed in a web browser.
