

GraphQL Hooks Example

[GraphQL Hooks](#) is a library from NearForm that intends to be a minimal hooks-first GraphQL client. Providing a similar API to Apollo.

You'll see this shares the same [graph.cool](#) backend as the Apollo example, this is so you can compare the two side by side. The app itself should also look identical.

This started life as a copy of the `with-apollo` example. We then stripped out Apollo and replaced it with `graphql-hooks`. This was mostly as an exercise in ensuring basic functionality could be achieved in a similar way to Apollo. The [bundle size](#) of `graphql-hooks` is tiny in comparison to Apollo and should cover a fair amount of use cases.

Deploy your own

Deploy the example using [Vercel](#):

How to use

Execute [create-next-app](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-graphql-hooks with-graphql-hooks-app
# or
yarn create next-app --example with-graphql-hooks with-graphql-hooks-app
# or
pnpm create next-app -- --example with-graphql-hooks with-graphql-hooks-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
