

Default Theme

Here's what the theme object looks like with the default values.

Explore

Explore the default theme object:

```
{{"demo": "DefaultTheme.js", "hideToolbar": true, "bg": "inline"}}
```

Tip: you can play with the documentation theme object in your browser console, as the **theme** variable is exposed on all the documentation pages. Please note that **the documentation site is using a custom theme**.

If you want to learn more about how the theme is assembled, take a look at `material-ui/style/createTheme.js`, and the related imports which `createTheme` uses.
