

gb plugin

A project based build tool for the Go programming language.

See <https://getgb.io> for the full `gb` documentation

- Adds completion support for all `gb` commands.
- Also supports completion for the [gb-vendor](#) plugin.

To use it, add `gb` to your plugins array:

```
plugins=(... gb)
```

Caveats

The `git` plugin defines an alias `gb` that usually conflicts with the `gb` program. If you're having trouble with it, remove it by adding `unalias gb` at the end of your `zshrc` file.
