

Home > puppeteer > Page > setBypassCSP

Page.setBypassCSP() method

Toggles bypassing page's Content-Security-Policy.

Signature:

```
setBypassCSP(enabled: boolean): Promise<void>;
```

Parameters

Parameter	Type	Description
enabled	boolean	sets bypassing of page's Content-Security-Policy.

Returns:

Promise<void>

Remarks

NOTE: CSP bypassing happens at the moment of CSP initialization rather than evaluation. Usually, this means that `page.setBypassCSP` should be called before navigating to the domain.
