

PostCSS Configuration Is a Function

Why This Error Occurred The project's custom PostCSS configuration exports a function instead of an object.

Possible Ways to Fix It Adjust the custom PostCSS configuration to not export a function. Instead, return a plain object—if you need environment information, read it from `process.env`.

Before

```
module.exports = ({ env }) => ({
  plugins: {
    'postcss-plugin': env === 'production' ? {} : false,
  },
})
```

After

```
module.exports = {
  plugins: {
    'postcss-plugin': process.env.NODE_ENV === 'production' ? {} : false,
  },
}
```
