

The provided export path doesn't match the page.

Why This Error Occurred An `exportPathMap` path was improperly matched to a dynamically routed page. This would result in the page missing its URL parameters.

Possible Ways to Fix It Change your `exportPathMap` function in `next.config.js` to have a path that matches the dynamically routed page.

```
module.exports = {  
  exportPathMap: function () {  
    return {  
      '/': { page: '/' },  
      // '/blog/nextjs': { page: '/blog/[post]/comment/[id]' }, // wrong  
      '/blog/nextjs/comment/1': { page: '/blog/[post]/comment/[id]' }, // correct  
    }  
  },  
}
```
