

## Nanoc plugin

This plugin adds some aliases and autocompletion for common Nanoc commands.

To use it, add **nanoc** to the plugins array in your zshrc file:

```
plugins=(... nanoc)
```

### Aliases

Alias	Command	Description
n	<b>nanoc</b>	Main Nanoc command
nco	<b>nanoc compile</b>	Compile all items of the current site
ncs	<b>nanoc create-site</b>	Create a new site at the given path. The site will use the filesystem data source
nd	<b>nanoc deploy</b>	Deploy the compiled site to the destination (specified with <b>--target</b> )
np	<b>nanoc prune</b>	Remove files not managed by Nanoc from the output directory
nv	<b>nanoc view</b>	Start the static web server (on port 3000 and all IP addresses, unless specified)
