

Indexed Format

In this format each pixel is represented by an 8 bit index into a 256 entry ARGB palette. It is intended for [ref: Video Output Overlays <osd>](#) only. There are no ioctls to access the palette, this must be done with ioctls of the Linux framebuffer API.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\v4l\ (linux-master) (Documentation) (userspace-api) (media) (v4l)pixfmt-indexed.rst, line 9); [backlink](#)

Unknown interpreted text role "ref".
