

@fontawesome/fontawesome-common-types - SVG with JavaScript

"I came here to chew bubblegum and install Font Awesome 6 - and I'm all out of bubblegum"

npm v6.2.0

What is this package?

Font Awesome 6 JavaScript packages support TypeScript. This package abstracts out some of the common definitions that those packages use.

Here be dragons

If you are trying to import types from this package we *highly* recommend you do the following instead as *all types in this package are re-exported to the main fontawesome package*.

your.ts

```
import {
  IconName
} from '@fortawesome/fontawesome-svg-core'

const myIcon: IconName = "..."
```
