

# Netfilter Sysfs variables

## /proc/sys/net/netfilter/\* Variables:

nf\_log\_all\_netns - BOOLEAN

- 0 - disabled (default)
- not 0 - enabled

By default, only init\_net namespace can log packets into kernel log with LOG target; this aims to prevent containers from flooding host kernel log. If enabled, this target also works in other network namespaces. This variable is only accessible from init\_net.
