

TOOLS

This directory contains debugging and investigation tools for V8.

The contents are regularly mirrored to <http://v8.dev/tools>.

Local Development

For local development you have to start a local webserver under <http://localhost:8000>:

```
cd tools/;
npm install;
ws;
```

Local Symbol Server

The system-analyzer can symbolize profiles for local binaries by running a local symbol server

```
cd tools/;
ws --stack system-analyzer/lws-middleware.js lws-static cors;
```

Note that the local symbol server will run `nm` and `objdump` and has access to your files.
