

Container for displaying data in calendar form.

## When To Use

When data is in the form of dates, such as schedules, timetables, prices calendar, lunar calendar. This component also supports Year/Month switch.

## API

**Note:** Part of the Calendar's locale is read from `value`. So, please set the locale of `moment` correctly.

```
// The default locale is en-US, if you want to use other locale, just set locale in
entry file globally.
// import moment from 'moment';
// import 'moment/locale/zh-cn';
// moment.locale('zh-cn');

<Calendar
  dateCellRender={dateCellRender}
  monthCellRender={monthCellRender}
  onPanelChange={onPanelChange}
  onSelect={onSelect}
/>
```

Property	Description	Type	Default	Version
dateCellRender	Customize the display of the date cell, the returned content will be appended to the cell	function(date: moment): ReactNode	-
