

# What's New in Python 2.7

**Author:** A.M. Kuchling (amk at amk.ca)

This article explains the new features in Python 2.7. Python 2.7 was released on July 3, 2010.

Numeric handling has been improved in many ways, for both floating-point numbers and for the `:class:`decimal.Decimal`` class. There are some useful additions to the standard library, such as a greatly enhanced `mod:`unittest`` module, the `mod:`argparse`` module for parsing command-line options, convenient `:class:`~collections.OrderedDict`` and `:class:`~collections.Counter`` classes in the `mod:`collections`` module, and many other improvements.

Python 2.7 is planned to be the last of the 2.x releases, so we worked on making it a good release for the long term. To help with porting to Python 3, several new features from the Python 3.x series have been included in 2.7.

This article doesn't attempt to provide a complete specification of the new features, but instead provides a convenient overview. For full details, you should refer to the documentation for Python 2.7 at <https://docs.python.org>. If you want to understand the rationale for the design and implementation, refer to the PEP for a particular new feature or the issue on <https://bugs.python.org> in which a change was discussed. Whenever possible, "What's New in Python" links to the bug/patch item for each change.

## The Future for Python 2.x

Python 2.7 is the last major release in the 2.x series, as the Python maintainers have shifted the focus of their new feature development efforts to the Python 3.x series. This means that while Python 2 continues to receive bug fixes, and to be updated to build correctly on new hardware and versions of supported operating systems, there will be no new full feature releases for the language or standard library.

However, while there is a large common subset between Python 2.7 and Python 3, and many of the changes involved in migrating to that common subset, or directly to Python 3, can be safely automated, some other changes (notably those associated with Unicode handling) may require careful consideration, and preferably robust automated regression test suites, to migrate effectively.

This means that Python 2.7 will remain in place for a long time, providing a stable and supported base platform for production systems that have not yet been ported to Python 3. The full expected lifecycle of the Python 2.7 series is detailed in [PEP 373](#).

Some key consequences of the long-term significance of 2.7 are:

- As noted above, the 2.7 release has a much longer period of maintenance when compared to earlier 2.x versions. Python 2.7 is currently expected to remain supported by the core development team (receiving security updates and other bug fixes) until

at least 2020 (10 years after its initial release, compared to the more typical support period of 18--24 months).

- As the Python 2.7 standard library ages, making effective use of the Python Package Index (either directly or via a redistributor) becomes more important for Python 2 users. In addition to a wide variety of third party packages for various tasks, the available packages include backports of new modules and features from the Python 3 standard library that are compatible with Python 2, as well as various tools and libraries that can make it easier to migrate to Python 3. The [Python Packaging User Guide](#) provides guidance on downloading and installing software from the Python Package Index.
- While the preferred approach to enhancing Python 2 is now the publication of new packages on the Python Package Index, this approach doesn't necessarily work in all cases, especially those related to network security. In exceptional cases that cannot be handled adequately by publishing new or updated packages on PyPI, the Python Enhancement Proposal process may be used to make the case for adding new features directly to the Python 2 standard library. Any such additions, and the maintenance releases where they were added, will be noted in the [ref:py27-maintenance-enhancements](#) section below.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 119); [backlink](#)

Unknown interpreted text role "ref".

For projects wishing to migrate from Python 2 to Python 3, or for library and framework developers wishing to support users on both Python 2 and Python 3, there are a variety of tools and guides available to help decide on a suitable approach and manage some of the technical details involved. The recommended starting point is the [ref:pyporting-howto](#) HOWTO guide.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 129); [backlink](#)

Unknown interpreted text role "ref".

## Changes to the Handling of Deprecation Warnings

For Python 2.7, a policy decision was made to silence warnings only of interest to developers by default. [exc:DeprecationWarning](#) and its descendants are now ignored unless otherwise requested, preventing users from seeing warnings triggered by an application. This change was also made in the branch that became Python 3.2. (Discussed on stdlib-sig and carried out in [issue:7319](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 139); [backlink](#)

Unknown interpreted text role "exc".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 139); [backlink](#)

Unknown interpreted text role "issue".

In previous releases, [exc:DeprecationWarning](#) messages were enabled by default, providing Python developers with a clear indication of where their code may break in a future major version of Python.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 146); [backlink](#)

Unknown interpreted text role "exc".

However, there are increasingly many users of Python-based applications who are not directly involved in the development of those applications. [exc:DeprecationWarning](#) messages are irrelevant to such users, making them worry about an application that's actually working correctly and burdening application developers with responding to these concerns.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 151); [backlink](#)

Unknown interpreted text role "exc".

You can re-enable display of [exc:DeprecationWarning](#) messages by running Python with the [option:-Wdefault <-W>](#) (short form: [option:-Wd <-W>](#)) switch, or by setting the [envvar:PYTHONWARNINGS](#) environment variable to "default" (or "d") before running Python. Python code can also re-enable them by calling `warnings.simplefilter('default')`.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 158); [backlink](#)

Unknown interpreted text role "exc".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 158); [backlink](#)

Unknown interpreted text role "option".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 158); [backlink](#)

Unknown interpreted text role "option".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 158); [backlink](#)

Unknown interpreted text role "envvar".

The `unittest` module also automatically reenables deprecation warnings when running tests.

## Python 3.1 Features

Much as Python 2.6 incorporated features from Python 3.0, version 2.7 incorporates some of the new features in Python 3.1. The 2.x series continues to provide tools for migrating to the 3.x series.

A partial list of 3.1 features that were backported to 2.7:

- The syntax for set literals (`{1, 2, 3}` is a mutable set).
- Dictionary and set comprehensions (`{i: i*2 for i in range(3)}`).
- Multiple context managers in a single `keyword: 'with'` statement.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 181); [backlink](#)

Unknown interpreted text role "keyword".

- A new version of the `mod: 'io'` library, rewritten in C for performance.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 182); [backlink](#)

Unknown interpreted text role "mod".

- The ordered-dictionary type described in `ref: pep-0372`.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 183); [backlink](#)

Unknown interpreted text role "ref".

- The new `" , "` format specifier described in `ref: pep-0378`.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 184); [backlink](#)

Unknown interpreted text role "ref".

- The `class: 'memoryview'` object.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 185); [backlink](#)

Unknown interpreted text role "class".

- A small subset of the `:mod:'importlib'` module, [described below](#).

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 186); [backlink](#)

Unknown interpreted text role "mod".

- The `:func:'repr'` of a float `x` is shorter in many cases: it's now based on the shortest decimal string that's guaranteed to round back to `x`. As in previous versions of Python, it's guaranteed that `float(repr(x))` recovers `x`.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 188); [backlink](#)

Unknown interpreted text role "func".

- Float-to-string and string-to-float conversions are correctly rounded. The `:func:'round'` function is also now correctly rounded.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 192); [backlink](#)

Unknown interpreted text role "func".

- The `:ctype:'PyCapsule'` type, used to provide a C API for extension modules.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 194); [backlink](#)

Unknown interpreted text role "ctype".

- The `:cfunc:'PyLong_AsLongAndOverflow'` C API function.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 195); [backlink](#)

Unknown interpreted text role "c:func".

Other new Python3-mode warnings include:

- `:func:'operator.isCallable'` and `:func:'operator.sequenceIncludes'`, which are not supported in 3.x, now trigger warnings.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 199); [backlink](#)

Unknown interpreted text role "func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 199); [backlink](#)

Unknown interpreted text role "func".

- The `:option:'!-3'` switch now automatically enables the `:option:'!-Qwarn'` switch that causes warnings about using classic division with integers and long integers.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 201); [backlink](#)

Unknown interpreted text role "option".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 201); [backlink](#)

Unknown interpreted text role "option".

## PEP 372: Adding an Ordered Dictionary to collections

Regular Python dictionaries iterate over key/value pairs in arbitrary order. Over the years, a number of authors have written alternative implementations that remember the order that the keys were originally inserted. Based on the experiences from those implementations, 2.7 introduces a new `:class:`~collections.OrderedDict`` class in the `:mod:`collections`` module.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 216); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 216); [backlink](#)

Unknown interpreted text role "mod".

The `:class:`~collections.OrderedDict`` API provides the same interface as regular dictionaries but iterates over keys and values in a guaranteed order depending on when a key was first inserted:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 222); [backlink](#)

Unknown interpreted text role "class".

```
>>> from collections import OrderedDict
>>> d = OrderedDict([('first', 1),
...                  ('second', 2),
...                  ('third', 3)])
>>> d.items()
[('first', 1), ('second', 2), ('third', 3)]
```

If a new entry overwrites an existing entry, the original insertion position is left unchanged:

```
>>> d['second'] = 4
>>> d.items()
[('first', 1), ('second', 4), ('third', 3)]
```

Deleting an entry and reinserting it will move it to the end:

```
>>> del d['second']
>>> d['second'] = 5
>>> d.items()
[('first', 1), ('third', 3), ('second', 5)]
```

The `:meth:`~collections.OrderedDict.popitem`` method has an optional *last* argument that defaults to `True`. If *last* is true, the most recently added key is returned and removed; if it's false, the oldest key is selected:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 247); [backlink](#)

Unknown interpreted text role "meth".

```
>>> od = OrderedDict([(x,0) for x in range(20)])
>>> od.popitem()
(19, 0)
>>> od.popitem()
(18, 0)
>>> od.popitem(last=False)
```

```
(0, 0)
>>> od.popitem(last=False)
(1, 0)
```

Comparing two ordered dictionaries checks both the keys and values, and requires that the insertion order was the same:

```
>>> od1 = OrderedDict([('first', 1),
...                     ('second', 2),
...                     ('third', 3)])
>>> od2 = OrderedDict([('third', 3),
...                     ('first', 1),
...                     ('second', 2)])
>>> od1 == od2
False
>>> # Move 'third' key to the end
>>> del od2['third']; od2['third'] = 3
>>> od1 == od2
True
```

Comparing an `:class:`~collections.OrderedDict`` with a regular dictionary ignores the insertion order and just compares the keys and values.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 278); [backlink](#)  
Unknown interpreted text role "class".

How does the `:class:`~collections.OrderedDict`` work? It maintains a doubly-linked list of keys, appending new keys to the list as they're inserted. A secondary dictionary maps keys to their corresponding list node, so deletion doesn't have to traverse the entire linked list and therefore remains  $O(1)$ .

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 281); [backlink](#)  
Unknown interpreted text role "class".

The standard library now supports use of ordered dictionaries in several modules.

- The `:mod:`ConfigParser`` module uses them by default, meaning that configuration files can now be read, modified, and then written back in their original order.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 290); [backlink](#)  
Unknown interpreted text role "mod".

- The `:meth:`~collections.somenamedtuple._asdict()`` method for `:func:`collections.namedtuple`` now returns an ordered dictionary with the values appearing in the same order as the underlying tuple indices.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 294); [backlink](#)  
Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 294); [backlink](#)  
Unknown interpreted text role "func".

- The `:mod:`json`` module's `:class:`~json.JSONDecoder`` class constructor was extended with an `object_pairs_hook` parameter to allow `:class:`OrderedDict`` instances to be built by the decoder. Support was also added for third-party tools like [PyYAML](#).

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 298); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 298); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 298); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 304)

Unknown directive type "seealso".

```
.. seealso::
```

```
:pep:`372` - Adding an ordered dictionary to collections  
PEP written by Armin Ronacher and Raymond Hettinger;  
implemented by Raymond Hettinger.
```

## PEP 378: Format Specifier for Thousands Separator

To make program output more readable, it can be useful to add separators to large numbers, rendering them as 18,446,744,073,709,551,616 instead of 18446744073709551616.

The fully general solution for doing this is the `mod:'locale'` module, which can use different separators ("," in North America, "." in Europe) and different grouping sizes, but `mod:'locale'` is complicated to use and unsuitable for multi-threaded applications where different threads are producing output for different locales.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 319); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 319); [backlink](#)

Unknown interpreted text role "mod".

Therefore, a simple comma-grouping mechanism has been added to the mini-language used by the `meth:'str.format'` method. When formatting a floating-point number, simply include a comma between the width and the precision:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 325); [backlink](#)

Unknown interpreted text role "meth".

```
>>> '{:20,.2f}'.format(18446744073709551616.0)  
'18,446,744,073,709,551,616.00'
```

When formatting an integer, include the comma after the width:

```
>>> '{:20,d}'.format(18446744073709551616)  
'18,446,744,073,709,551,616'
```

This mechanism is not adaptable at all; commas are always used as the separator and the grouping is always into three-digit groups. The comma-formatting mechanism isn't as general as the `mod:'locale'` module, but it's easier to use.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 338); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 343)

Unknown directive type "seealso".

.. seealso::

:pep:`378` - Format Specifier for Thousands Separator  
PEP written by Raymond Hettinger; implemented by Eric Smith.

## PEP 389: The argparse Module for Parsing Command Lines

The `mod:`argparse`` module for parsing command-line arguments was added as a more powerful replacement for the `mod:`optparse`` module.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 351); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 351); [backlink](#)

Unknown interpreted text role "mod".

This means Python now supports three different modules for parsing command-line arguments: `mod:`getopt``, `mod:`optparse``, and `mod:`argparse``. The `mod:`getopt`` module closely resembles the C library's `c:func:`getopt`` function, so it remains useful if you're writing a Python prototype that will eventually be rewritten in C. `mod:`optparse`` becomes redundant, but there are no plans to remove it because there are many scripts still using it, and there's no automated way to update these scripts. (Making the `mod:`argparse`` API consistent with `mod:`optparse``'s interface was discussed but rejected as too messy and difficult.)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 355); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 355); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 355); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 355); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 355); [backlink](#)

Unknown interpreted text role "c:func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 355); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 355); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 355); [backlink](#)**

Unknown interpreted text role "mod".

In short, if you're writing a new script and don't need to worry about compatibility with earlier versions of Python, use `mod:argparse` instead of `mod:optparse`.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 366); [backlink](#)**

Unknown interpreted text role "mod".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 366); [backlink](#)**

Unknown interpreted text role "mod".

Here's an example:

```
import argparse

parser = argparse.ArgumentParser(description='Command-line example.')

# Add optional switches
parser.add_argument('-v', action='store_true', dest='is_verbose',
                    help='produce verbose output')
parser.add_argument('-o', action='store', dest='output',
                    metavar='FILE',
                    help='direct output to FILE instead of stdout')
parser.add_argument('-C', action='store', type=int, dest='context',
                    metavar='NUM', default=0,
                    help='display NUM lines of added context')

# Allow any number of additional arguments.
parser.add_argument(nargs='*', action='store', dest='inputs',
                    help='input filenames (default is stdin)')

args = parser.parse_args()
print args.__dict__
```

Unless you override it, `:option: '!-h'` and `:option: '!--help'` switches are automatically added, and produce neatly formatted output:

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 393); [backlink](#)**

Unknown interpreted text role "option".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 393); [backlink](#)**

Unknown interpreted text role "option".

```
-> ./python.exe argparse-example.py --help
usage: argparse-example.py [-h] [-v] [-o FILE] [-C NUM] [inputs [inputs ...]]
```

Command-line example.

positional arguments:  
inputs input filenames (default is stdin)

optional arguments:  
-h, --help show this help message and exit  
-v produce verbose output  
-o FILE direct output to FILE instead of stdout  
-C NUM display NUM lines of added context

As with `mod:optparse`, the command-line switches and arguments are returned as an object with attributes named by the *dest* parameters:

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-**

main\Doc\whatsnew\cpython-main] [Doc] [whatsnew]2.7.rst, line 410); [backlink](#)

Unknown interpreted text role "mod".

```
-> ./python.exe argparse-example.py -v
{'output': None,
 'is_verbose': True,
 'context': 0,
 'inputs': []}

-> ./python.exe argparse-example.py -v -o /tmp/output -C 4 file1 file2
{'output': '/tmp/output',
 'is_verbose': True,
 'context': 4,
 'inputs': ['file1', 'file2']}
```

`:mod:`argparse`` has much fancier validation than `:mod:`optparse``; you can specify an exact number of arguments as an integer, 0 or more arguments by passing '\*', 1 or more by passing '+', or an optional argument with '?'. A top-level parser can contain sub-parsers to define subcommands that have different sets of switches, as in `svn commit`, `svn checkout`, etc. You can specify an argument's type as `:class:`~argparse.FileType``, which will automatically open files for you and understands that '-' means standard input or output.

## PEP 391: Dictionary-Based Configuration For Logging

The `:mod:`logging`` module is very flexible; applications can define a tree of logging subsystems, and each logger in this tree can filter out certain messages, format them differently, and direct messages to a varying number of handlers.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main] [Doc] [whatsnew]2.7.rst, line 450); [backlink](#)

Unknown interpreted text role "mod".

All this flexibility can require a lot of configuration. You can write Python statements to create objects and set their properties, but a complex set-up requires verbose but boring code. `:mod:`logging`` also supports a `:func:`~logging.fileConfig`` function that parses a file, but the file format doesn't support configuring filters, and it's messier to generate programmatically.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-

main\Doc\whatsnew\cpython-main] [Doc] [whatsnew]2.7.rst, line 455); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main] [Doc] [whatsnew]2.7.rst, line 455); [backlink](#)

Unknown interpreted text role "func".

Python 2.7 adds a `:func:`~logging.dictConfig`` function that uses a dictionary to configure logging. There are many ways to produce a dictionary from different sources: construct one with code; parse a file containing JSON; or use a YAML parsing library if one is installed. For more information see `:ref:`logging-config-api``.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main] [Doc] [whatsnew]2.7.rst, line 462); [backlink](#)

Unknown interpreted text role "func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main] [Doc] [whatsnew]2.7.rst, line 462); [backlink](#)

Unknown interpreted text role "ref".

The following example configures two loggers, the root logger and a logger named "network". Messages sent to the root logger will be sent to the system log using the syslog protocol, and messages to the "network" logger will be written to a `:file:`network.log`` file that will be rotated once the log reaches 1MB.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main] [Doc] [whatsnew]2.7.rst, line 468); [backlink](#)

Unknown interpreted text role "file".

```
import logging
import logging.config

configdict = {
    'version': 1,      # Configuration schema in use; must be 1 for now
    'formatters': {
        'standard': {
            'format': ('%(asctime)s %(name)-15s '
                       '%(levelname)-8s %(message)s')},
    },
    'handlers': {'netlog': {'backupCount': 10,
                           'class': 'logging.handlers.RotatingFileHandler',
                           'filename': '/logs/network.log',
                           'formatter': 'standard',
                           'level': 'INFO',
                           'maxBytes': 1000000},
                 'syslog': {'class': 'logging.handlers.SysLogHandler',
                           'formatter': 'standard',
                           'level': 'ERROR'}},
    # Specify all the subordinate loggers
    'loggers': {
        'network': {
            'handlers': ['netlog']
        },
    },
    # Specify properties of the root logger
    'root': {
        'handlers': ['syslog']
    },
}

# Set up configuration
logging.config.dictConfig(configdict)

# As an example, log two error messages
logger = logging.getLogger('/')
logger.error('Database not found')

netlogger = logging.getLogger('network')
netlogger.error('Connection failed')
```

Three smaller enhancements to the `:mod:`logging`` module, all implemented by Vinay Sajip, are:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 518); [backlink](#)

Unknown interpreted text role "mod".

- The `:class:`~logging.handlers.SysLogHandler`` class now supports syslogging over TCP. The constructor has a *socktype* parameter giving the type of socket to use, either `:const:`socket.SOCK_DGRAM`` for UDP or `:const:`socket.SOCK_STREAM`` for TCP. The default protocol remains UDP.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 523); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 523); [backlink](#)

Unknown interpreted text role "const".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 523); [backlink](#)

Unknown interpreted text role "const".

- `:class:`~logging.Logger`` instances gained a `:meth:`~logging.Logger.getChild`` method that retrieves a descendant logger using a relative path. For example, once you retrieve a logger by doing `log = getLogger('app')`, calling `log.getChild('network.listen')` is equivalent to `getLogger('app.network.listen')`.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 529); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 529); [backlink](#)

Unknown interpreted text role "meth".

- The `:class:`~logging.LoggerAdapter`` class gained an `:meth:`~logging.LoggerAdapter.isEnabledFor`` method that takes a *level* and returns whether the underlying logger would process a message of that level of importance.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 535); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 535); [backlink](#)

Unknown interpreted text role "meth".

Unknown directive type "seealso".

.. seealso::

## PEP 3106: Dictionary Views

The dictionary methods `meth:~dict.keys`, `meth:~dict.values`, and `meth:~dict.items` are different in Python 3.x. They return an object called a `dfn:view` instead of a fully materialized list.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 550); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 550); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 550); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 550); [backlink](#)

Unknown interpreted text role "dfn".

It's not possible to change the return values of `meth:~dict.keys`, `meth:~dict.values`, and `meth:~dict.items` in Python 2.7 because too much code would break. Instead the 3.x versions were added under the new names `meth:~dict.viewkeys`, `meth:~dict.viewvalues`, and `meth:~dict.viewitems`.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 554); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 554); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 554); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 554); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 554); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 554); [backlink](#)

Unknown interpreted text role "meth".

```
>>> d = dict((i*10, chr(65+i)) for i in range(26))
```

```
>>> d
{0: 'A', 130: 'N', 10: 'B', 140: 'O', 20: ..., 250: 'Z'}
>>> d.viewkeys()
dict_keys([0, 130, 10, 140, 20, 150, 30, ..., 250])
```

Views can be iterated over, but the key and item views also behave like sets. The `&` operator performs intersection, and `|` performs a union:

```
>>> d1 = dict((i*10, chr(65+i)) for i in range(26))
>>> d2 = dict((i*.5, i) for i in range(1000))
>>> d1.viewkeys() & d2.viewkeys()
set([0.0, 10.0, 20.0, 30.0])
>>> d1.viewkeys() | range(0, 30)
set([0, 1, 130, 3, 4, 5, 6, ..., 120, 250])
```

The view keeps track of the dictionary and its contents change as the dictionary is modified:

```
>>> vk = d.viewkeys()
>>> vk
dict_keys([0, 130, 10, ..., 250])
>>> d[260] = '&'
>>> vk
dict_keys([0, 130, 260, 10, ..., 250])
```

However, note that you can't add or remove keys while you're iterating over the view:

```
>>> for k in vk:
...     d[k*2] = k
...
Traceback (most recent call last):
  File "<stdin>", line 1, in <module>
RuntimeError: dictionary changed size during iteration
```

You can use the view methods in Python 2.x code, and the 2to3 converter will change them to the standard `meth:~dict.keys`, `meth:~dict.values`, and `meth:~dict.items` methods.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 599); [backlink](#)

## PEP 3137: The memoryview Object

The `class:memoryview` object provides a view of another object's memory content that matches the `class:bytes` type's interface.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 613); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 613); [backlink](#)**

Unknown interpreted text role "class".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 616)**

Unknown directive type "doctest".

```
.. doctest::
   :options: +SKIP

   >>> import string
   >>> m = memoryview(string.letters)
   >>> m
   <memory at 0x37f850>
   >>> len(m)           # Returns length of underlying object
   52
   >>> m[0], m[25], m[26] # Indexing returns one byte
   ('a', 'z', 'A')
   >>> m2 = m[0:26]      # Slicing returns another memoryview
   >>> m2
   <memory at 0x37f080>
```

The content of the view can be converted to a string of bytes or a list of integers:

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 634)**

Unknown directive type "doctest".

PEP written by Guido van Rossum.
Implemented by Travis Oliphant, Antoine Pitrou and others.
Backported to 2.7 by Antoine Pitrou; :issue:`2396`.
```

## Other Language Changes

Some smaller changes made to the core Python language are:

- The syntax for set literals has been backported from Python 3.x. Curly brackets are used to surround the contents of the resulting mutable set; set literals are distinguished from dictionaries by not containing colons and values. {} continues to represent an empty dictionary; use `set()` for an empty set.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 2.7.rst, line 683)**

Unknown directive type "doctest".

```
.. doctest::
:options: +SKIP

>>> {1, 2, 3, 4, 5}
set([1, 2, 3, 4, 5])
>>> set() # empty set
set([])
>>> {}    # empty dict
{}
```

Backported by Alexandre Vassalotti; :issue:`2335`.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 2.7.rst, line 693);**  
[backlink](#)

Unknown interpreted text role "issue".

- Dictionary and set comprehensions are another feature backported from 3.x, generalizing list/generator comprehensions to use the literal syntax for sets and dictionaries.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 2.7.rst, line 699)**

Unknown directive type "doctest".

```
.. doctest::
:options: +SKIP

>>> {x: x*x for x in range(6)}
{0: 0, 1: 1, 2: 4, 3: 9, 4: 16, 5: 25}
>>> {'a'*x for x in range(6)}
set(['', 'a', 'aa', 'aaa', 'aaaa', 'aaaaa'])
```

Backported by Alexandre Vassalotti; :issue:`2333`.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 2.7.rst, line 707);**  
[backlink](#)

Unknown interpreted text role "issue".

- The `:keyword:`with`` statement can now use multiple context managers in one statement. Context managers are processed from left to right and each one is treated as beginning a new `:keyword:`!with`` statement. This means that:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 709); [backlink](#)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 709); [backlink](#)

Unknown interpreted text role "keyword".

```
with A() as a, B() as b:
    ... suite of statements ...
```

is equivalent to:

```
with A() as a:
    with B() as b:
        ... suite of statements ...
```

The `:func:`contextlib.nested`` function provides a very similar function, so it's no longer necessary and has been deprecated.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 723); [backlink](#)

Unknown interpreted text role "func".

(Proposed in <https://codereview.appspot.com/53094>; implemented by Georg Brandl.)

- Conversions between floating-point numbers and strings are now correctly rounded on most platforms. These conversions occur in many different places: `:func:`str`` on floats and complex numbers; the `:class:`float`` and `:class:`complex`` constructors; numeric formatting; serializing and deserializing floats and complex numbers using the `:mod:`marshal``, `:mod:`pickle`` and `:mod:`json`` modules; parsing of float and imaginary literals in Python code; and `:class:`~decimal.Decimal``-to-float conversion.

Related to this, the `:func:`repr`` of a floating-point number  $x$  now returns a result based on the shortest decimal string that's guaranteed to round back to  $x$  under correct rounding (with round-half-to-even rounding mode). Previously it gave a string based on rounding  $x$  to 17 decimal digits.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 741);**  
[backlink](#)

The rounding library responsible for this improvement works on Windows and on Unix platforms using the gcc, icc, or suncc compilers. There may be a small number of platforms where correct operation of this code cannot be guaranteed, so the code is not used on such systems. You can find out which code is being used by checking `:data:`sys.float_repr_style``, which will be `short` if the new code is in use and `legacy` if it isn't.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 749);**

Unknown interpreted text role "issue".

- Conversions from long integers and regular integers to floating point now round differently, returning the floating-point number closest to the number. This doesn't matter for small integers that can be converted exactly, but for large numbers that will unavoidably lose precision, Python 2.7 now approximates more closely. For example, Python 2.6 computed the following:

```
>>> n = 295147905179352891391
>>> float(n)
2.9514790517935283e+20
>>> n - long(float(n))
65535L
```

Python 2.7's floating-point result is larger, but much closer to the true value:

```
>>> n = 295147905179352891391
>>> float(n)
2.9514790517935289e+20
>>> n - long(float(n))
-1L
```

(Implemented by Mark Dickinson; `:issue:`3166``.)

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 782);**  
[backlink](#)

Unknown interpreted text role "issue".

Integer division is also more accurate in its rounding behaviours. (Also implemented by Mark Dickinson; [issue:1811](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 784); [backlink](#)

Unknown interpreted text role "issue".

- Implicit coercion for complex numbers has been removed; the interpreter will no longer ever attempt to call a `meth: '__coerce__'` method on complex objects. (Removed by Meador Inge and Mark Dickinson; [issue:5211](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 787); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 787); [backlink](#)

Unknown interpreted text role "issue".

- The `meth: 'str.format'` method now supports automatic numbering of the replacement fields. This makes using `meth: 'str.format'` more closely resemble using `%s` formatting:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 791); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 791); [backlink](#)

Unknown interpreted text role "meth".

```
>>> '{}: {}: {}'.format(2009, 04, 'Sunday')
'2009:4:Sunday'
>>> '{}: {}: {}'.format(2009, 4, day='Sunday')
'2009:4:Sunday'
```

The auto-numbering takes the fields from left to right, so the first `{...}` specifier will use the first argument to `meth: 'str.format'`, the next specifier will use the next argument, and so on. You can't mix auto-numbering and explicit numbering -- either number all of your specifier fields or none of them -- but you can mix auto-numbering and named fields, as in the second example above. (Contributed by Eric Smith; [issue:5237](#).)

The 'F' format code now always formats its output using uppercase characters, so it will now produce 'INF' and 'NaN'. (Contributed by Eric Smith; [issue:3382](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 814); [backlink](#)

Unknown interpreted text role "issue".

A low-level change: the `meth:object.__format__` method now triggers a `exc:PendingDeprecationWarning` if it's passed a format string, because the `meth:__format__` method for `class:object` converts the object to a string representation and formats that. Previously the method silently applied the format string to the string representation, but that could hide mistakes in Python code. If you're supplying formatting information such as an alignment or precision, presumably you're expecting the formatting to be applied in some object-specific way. (Fixed by Eric Smith; [issue:7994](#).)

## Interpreter Changes

A new environment variable, `envvar: 'PYTHONWARNINGS'`, allows controlling warnings. It should be set to a string containing warning settings, equivalent to those used with the `option: '-W'` switch, separated by commas. (Contributed by Brian Curtin; [issue: '7301'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 909); [backlink](#)

Unknown interpreted text role "envvar".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 909); [backlink](#)

Unknown interpreted text role "option".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 909); [backlink](#)

Unknown interpreted text role "issue".

For example, the following setting will print warnings every time they occur, but turn warnings from the `mod: 'Cookie'` module into an error. (The exact syntax for setting an environment variable varies across operating systems and shells.)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 915); [backlink](#)

Unknown interpreted text role "mod".

```
export PYTHONWARNINGS=all,error:::Cookie:0
```

## Optimizations

Several performance enhancements have been added:

- A new opcode was added to perform the initial setup for `keyword: 'with'` statements, looking up the `meth: '__enter__'` and `meth: '__exit__'` methods. (Contributed by Benjamin Peterson.)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 932); [backlink](#)

Unknown interpreted text role "keyword".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 932); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 932); [backlink](#)

Unknown interpreted text role "meth".

- The garbage collector now performs better for one common usage pattern: when many objects are being allocated without deallocating any of them. This would previously take quadratic time for garbage collection, but now the number of full garbage collections is reduced as the number of objects on the heap grows. The new logic only performs a full garbage collection pass when the middle generation has been collected 10 times and when the number of survivor objects from the middle generation exceeds 10% of the number of objects in the oldest generation. (Suggested by Martin von Löwis and implemented by Antoine Pitrou; [issue: 4074](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 936); [backlink](#)

Unknown interpreted text role "issue".

- The garbage collector tries to avoid tracking simple containers which can't be part of a cycle. In Python 2.7, this is now true for tuples and dicts containing atomic types (such as ints, strings, etc.). Transitivity, a dict containing tuples of atomic types won't be tracked either. This helps reduce the cost of each garbage collection by decreasing the number of objects to be considered and traversed by the collector. (Contributed by Antoine Pitrou; [issue: 4688](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 947); [backlink](#)

Unknown interpreted text role "issue".

- Long integers are now stored internally either in base  $2^{15}$  or in base  $2^{30}$ , the base being determined at build time. Previously, they were always stored in base  $2^{15}$ . Using base  $2^{30}$  gives significant performance improvements on 64-bit machines, but benchmark results on 32-bit machines have been mixed. Therefore, the default is to use base  $2^{30}$  on 64-bit machines and base  $2^{15}$  on 32-bit machines; on Unix, there's a new configure option `option: '--enable-big-digits'` that can be used to override this default.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 956); [backlink](#)

Unknown interpreted text role "option".

Apart from the performance improvements this change should be invisible to end users, with one exception: for testing and debugging purposes there's a new structseq `data: sys.long_info` that provides information about the internal format, giving the number of bits per digit and the size in bytes of the C type used to store each digit:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 965); [backlink](#)

Unknown interpreted text role "data".

```
>>> import sys
>>> sys.long_info
sys.long_info(bits_per_digit=30, sizeof_digit=4)
```

(Contributed by Mark Dickinson; [issue: 4258](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 976); [backlink](#)

Unknown interpreted text role "issue".

Another set of changes made long objects a few bytes smaller: 2 bytes smaller on 32-bit systems and 6 bytes on 64-bit. (Contributed by Mark Dickinson; [issue: 5260](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 978); [backlink](#)

Unknown interpreted text role "issue".

- The division algorithm for long integers has been made faster by tightening the inner loop, doing shifts instead of multiplications, and fixing an unnecessary extra iteration. Various benchmarks show speedups of between 50% and 150% for long integer divisions and modulo operations. (Contributed by Mark Dickinson; [:issue:'5512'](#).) Bitwise operations are also significantly faster (initial patch by Gregory Smith; [:issue:'1087418'](#)).

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 982); [backlink](#)

Unknown interpreted text role "issue".

- The implementation of `%` checks for the left-side operand being a Python string and special-cases it; this results in a 1--3% performance increase for applications that frequently use `%` with strings, such as templating libraries. (Implemented by Collin Winter; [:issue:'5176'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 991); [backlink](#)

Unknown interpreted text role "issue".

- List comprehensions with an `if` condition are compiled into faster bytecode. (Patch by Antoine Pitrou, back-ported to 2.7 by Jeffrey Yasskin; [:issue:'4715'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 997); [backlink](#)

Unknown interpreted text role "issue".

- Converting an integer or long integer to a decimal string was made faster by special-casing base 10 instead of using a generalized conversion function that supports arbitrary bases. (Patch by Gawain Bolton; [:issue:'6713'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1001); [backlink](#)

Unknown interpreted text role "issue".

- The `.meth:'split'`, `.meth:'replace'`, `.meth:'rindex'`, `.meth:'rpartition'`, and `.meth:'rsplit'` methods of string-like types (strings, Unicode strings, and `.class:'bytearray'` objects) now use a fast reverse-search algorithm instead of a character-by-character scan. This is sometimes faster by a factor of 10. (Added by Florent Xicluna; [:issue:'7462'](#) and [:issue:'7622'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1006); [backlink](#)

Unknown interpreted text role "issue".

## New and Improved Modules

As in every release, Python's standard library received a number of enhancements and bug fixes. Here's a partial list of the most notable changes, sorted alphabetically by module name. Consult the [:file:'Misc/NEWS'](#) file in the source tree for a more complete list of changes, or look through the Subversion logs for all the details.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1027);** [backlink](#)

Unknown interpreted text role "file".

- The `mod:'bdb'` module's base debugging class `:class:`~bdb.Bdb`` gained a feature for skipping modules. The constructor now takes an iterable containing glob-style patterns such as `django.*`; the debugger will not step into stack frames from a module that matches one of these patterns. (Contributed by Maru Newby after a suggestion by Senthil Kumaran; [:issue:'5142'](#).)

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1033);**  
[backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1033);**  
[backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1033);**  
[backlink](#)

Unknown interpreted text role "issue".

- The `mod:'binascii'` module now supports the buffer API, so it can be used with `:class:'memoryview'` instances and other similar buffer objects. (Backported from 3.x by Florent Xicluna; [:issue:'7703'](#).)

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1041);**  
[backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1041);**  
[backlink](#)

Unknown interpreted text role "class".

[backlink](#)

Unknown interpreted text role "issue".

- Updated module: the `mod:'bsddb'` module has been updated from 4.7.2devel9 to version 4.8.4 of [the pybsddb package](#). The

new version features better Python 3.x compatibility, various bug fixes, and adds several new BerkeleyDB flags and methods. (Updated by JesÃ³s Cea AviÃ³n; [issue:8156](#)). The pybsddb changelog can be read at <http://hg.jcea.es/pybsddb/file/tip/ChangeLog>.)

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1045);**  
[backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1045);**  
[backlink](#)

Unknown interpreted text role "issue".

- The `mod:'bz2'` module's `:class:'~bz2.BZ2File'` now supports the context management protocol, so you can write with `bz2.BZ2File(...) as f:.` (Contributed by Hagen FÃ¼rstenau; [issue:3860](#).)

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1053);**  
[backlink](#)

Unknown interpreted text role "mod".

Unknown interpreted text role "class".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1053);**  
[backlink](#)

Unknown interpreted text role "issue".

- New class: the `:class:'~collections.Counter'` class in the `mod:'collections'` module is useful for tallying data. `:class:'~collections.Counter'` instances behave mostly like dictionaries but return zero for missing keys instead of raising a `:exc:'KeyError'`:

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1057);**  
[backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1057);**  
[backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1057);**  
[backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1057);**  
[backlink](#)

Unknown interpreted text role "exc".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1062)

Unknown directive type "doctest".

```
.. doctest::
:options: +NORMALIZE_WHITESPACE

>>> from collections import Counter
>>> c = Counter()
>>> for letter in 'here is a sample of english text':
...     c[letter] += 1
...
>>> c # doctest: +SKIP
Counter({' ': 6, 'e': 5, 's': 3, 'a': 2, 'i': 2, 'h': 2,
'l': 2, 't': 2, 'g': 1, 'f': 1, 'm': 1, 'o': 1, 'n': 1,
'p': 1, 'r': 1, 'x': 1})
>>> c['e']
5
>>> c['z']
0
```

There are three additional `:class:`~collections.Counter`` methods. `.meth:`~collections.Counter.most_common`` returns the N most common elements and their counts. `.meth:`~collections.Counter.elements`` returns an iterator over the contained elements, repeating each element as many times as its count. `.meth:`~collections.Counter.subtract`` takes an iterable and subtracts one for each element instead of adding; if the argument is a dictionary or another `:class:`Counter``, the counts are subtracted.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1079);

[backlink](#)

Unknown interpreted text role "issue".

Comparing instances of `:class:`~decimal.Decimal`` with floating-point numbers now produces sensible results based on the numeric values of the operands. Previously such comparisons would fall back to Python's default rules for comparing objects, which produced arbitrary results based on their type. Note that you still cannot combine `:class:`Decimal`` and floating-point in other operations such as addition, since you should be explicitly choosing how to convert between float and `:class:`~decimal.Decimal``. (Fixed by Mark Dickinson; `:issue:`2531``.)

- Updated module: The `mod:io` library has been upgraded to the version shipped with Python 3.1. For 3.1, the I/O library was entirely rewritten in C and is 2 to 20 times faster depending on the task being performed. The original Python version was renamed to the `mod:_pyio` module.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1345);**

Unknown interpreted text role "issue".

- New function: `itertools.compress(data, selectors)` takes two iterators. Elements of *data* are returned if the corresponding value in *selectors* is true:

```
itertools.compress('ABCDEF', [1,0,1,0,1,1]) =>
A, C, E, F
```

New function: `itertools.combinations_with_replacement(iter, r)` returns all the possible *r*-length combinations of elements from the iterable *iter*. Unlike `:func:`~itertools.combinations``, individual elements can be repeated in the generated combinations:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1370); [backlink](#)

Unknown interpreted text role "func".

```
itertools.combinations_with_replacement('abc', 2) =>
('a', 'a'), ('a', 'b'), ('a', 'c'),
('b', 'b'), ('b', 'c'), ('c', 'c')
```

Note that elements are treated as unique depending on their position in the input, not their actual values.

The `func:~itertools.count` function now has a `step` argument that allows incrementing by values other than 1. `func:~itertools.count` also now allows keyword arguments, and using non-integer values such as floats or `class:~decimal.Decimal` instances. (Implemented by Raymond Hettinger; [issue: 5032](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1382); [backlink](#)

- New function: `:func:`~runpy.run_path`` in the `:mod:`runpy`` module will execute the code at a provided *path* argument. *path* can be the path of a Python source file (`:file:`example.py``), a compiled bytecode file (`:file:`example.pyc``), a directory (`:file:`./package/``), or a zip archive (`:file:`example.zip``). If a directory or zip path is provided, it will be added to the front of `sys.path` and the module `:mod:`__main__`` will be imported. It's expected that the directory or zip contains a `:file:`__main__.py``; if it doesn't, some other `:file:`__main__.py`` might be imported from a location later in `sys.path`. This makes more of the machinery of `:mod:`runpy`` available to scripts that want to mimic the way Python's command line processes an explicit path name. (Added by Nick Coghlan; `:issue:`6816``.)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1462); [backlink](#)

Unknown interpreted text role "issue".

- The `mod:tarfile` module's default error handling has changed, to no longer suppress fatal errors. The default error level was previously 0, which meant that errors would only result in a message being written to the debug log, but because the debug log is not activated by default, these errors go unnoticed. The default error level is now 1, which raises an exception if there's an error. (Changed by Lars Gust  bel; [issue:7357](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1613); [backlink](#)

Unknown interpreted text role "issue".

`mod:tarfile` now supports filtering the `:class:~tarfile.TarInfo` objects being added to a tar file. When you call `meth:~tarfile.TarFile.add`, you may supply an optional *filter* argument that's a callable. The *filter* callable will be passed the `:class:~tarfile.TarInfo` for every file being added, and can modify and return it. If the callable returns `None`, the file will be excluded from the resulting archive. This is more powerful than the existing *exclude* argument, which has therefore been deprecated. (Added by Lars Gust  bel; [issue:6856](#).) The `:class:~tarfile.TarFile` class also now supports the context management protocol. (Added by Lars Gust  bel; [issue:7232](#).)

## New module: `importlib`

Python 3.1 includes the `:mod:`~importlib`` package, a re-implementation of the logic underlying Python's `:keyword:`import`` statement. `:mod:`~importlib`` is useful for implementors of Python interpreters and to users who wish to write new importers that can participate in the import process. Python 2.7 doesn't contain the complete `:mod:`~importlib`` package, but instead has a tiny subset that contains a single function, `:func:`~importlib.import_module``.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1735); [backlink](#)

Unknown interpreted text role "func".

`import_module(name, package=None)` imports a module. *name* is a string containing the module or package's name. It's possible to do relative imports by providing a string that begins with a `.` character, such as `..utils.errors`. For relative imports, the *package* argument must be provided and is the name of the package that will be used as the anchor for the relative import. `:func:`~importlib.import_module`` both inserts the imported module into `sys.modules` and returns the module object.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 1743); [backlink](#)**

Unknown interpreted text role "func".

Here are some examples:

```
>>> from importlib import import_module
>>> anydbm = import_module('anydbm') # Standard absolute import
>>> anydbm
<module 'anydbm' from '/p/python/Lib/anydbm.py'>
>>> # Relative import
>>> file_util = import_module('..file_util', 'distutils.command')
>>> file_util
<module 'distutils.file_util' from '/python/Lib/distutils/file_util.pyc'>
```

`:mod:`importlib`` was implemented by Brett Cannon and introduced in Python 3.1.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 1763); [backlink](#)**

Unknown interpreted text role "mod".

## New module: sysconfig

The `:mod:`sysconfig`` module has been pulled out of the Distutils package, becoming a new top-level module in its own right. `:mod:`sysconfig`` provides functions for getting information about Python's build process: compiler switches, installation paths, the platform name, and whether Python is running from its source directory.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 1770); [backlink](#)**

Unknown interpreted text role "mod".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 1770); [backlink](#)**

Unknown interpreted text role "mod".

Some of the functions in the module are:

- `:func:`~sysconfig.get_config_var`` returns variables from Python's Makefile and the `:file:`pyconfig.h`` file.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 1779); [backlink](#)**

Unknown interpreted text role "func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1779); [backlink](#)

Unknown interpreted text role "file".

- `:func:~sysconfig.get_config_vars` returns a dictionary containing all of the configuration variables.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1781); [backlink](#)

Unknown interpreted text role "func".

- `:func:~sysconfig.get_path` returns the configured path for a particular type of module: the standard library, site-specific modules, platform-specific modules, etc.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1783); [backlink](#)

Unknown interpreted text role "func".

- `:func:~sysconfig.is_python_build` returns true if you're running a binary from a Python source tree, and false otherwise.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1786); [backlink](#)

Unknown interpreted text role "func".

Consult the `:mod:sysconfig` documentation for more details and for a complete list of functions.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1789); [backlink](#)

Unknown interpreted text role "mod".

The Distutils package and `:mod:sysconfig` are now maintained by Tarek ZiadÃ©, who has also started a Distutils2 package (source repository at <https://hg.python.org/distutils2/>) for developing a next-generation version of Distutils.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1792); [backlink](#)

Unknown interpreted text role "mod".

## ttk: Themed Widgets for Tk

Tcl/Tk 8.5 includes a set of themed widgets that re-implement basic Tk widgets but have a more customizable appearance and can therefore more closely resemble the native platform's widgets. This widget set was originally called Tile, but was renamed to Ttk (for "themed Tk") on being added to Tcl/Tk release 8.5.

To learn more, read the `:mod:ttk` module documentation. You may also wish to read the Tcl/Tk manual page describing the Ttk theme engine, available at [https://www.tcl.tk/man/tcl8.5/TkCmd/ttk\\_intro.htm](https://www.tcl.tk/man/tcl8.5/TkCmd/ttk_intro.htm). Some screenshots of the Python/Ttk code in use are at <https://code.google.com/archive/p/python-ttk/wikis/Screenshots.wiki>.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1807); [backlink](#)

Unknown interpreted text role "mod".

The `:mod:ttk` module was written by Guilherme Polo and added in `:issue:2983`. An alternate version called `Tile.py`, written by Martin Franklin and maintained by Kevin Walzer, was proposed for inclusion in `:issue:2618`, but the authors argued that Guilherme Polo's work was more comprehensive.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 1826); [backlink](#)

Unknown interpreted text role "mod".

When used from the command line, the module can automatically discover tests. It's not as fancy as `py.test` or `nose`, but provides a simple way to run tests kept within a set of package directories. For example, the following command will search the `:file:'test/'` subdirectory for any importable test files named `test*.py`:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 1833); [backlink](#)

Unknown interpreted text role "file".

```
python -m unittest discover -s test
```

Consult the `mod:'unittest'` module documentation for more details. (Developed in `:issue:'6001'`.)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 1842); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 1842); [backlink](#)

Unknown interpreted text role "issue".

The `:func:'~unittest.main'` function supports some other new options:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 1845); [backlink](#)

Unknown interpreted text role "func".

- `:option:'-b <unittest -b>'` or `:option:'!--buffer'` will buffer the standard output and standard error streams during each test. If the test passes, any resulting output will be discarded; on failure, the buffered output will be displayed.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 1847); [backlink](#)

Unknown interpreted text role "option".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1847); [backlink](#)

Unknown interpreted text role "option".

- `:option:`-c <unittest -c>`` or `:option:`!--catch`` will cause the control-C interrupt to be handled more gracefully. Instead of interrupting the test process immediately, the currently running test will be completed and then the partial results up to the interruption will be reported. If you're impatient, a second press of control-C will cause an immediate interruption.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1852); [backlink](#)

Unknown interpreted text role "option".

With all these changes, the `:file:`unittest.py`` was becoming awkwardly large, so the module was turned into a package and the code split into several files (by Benjamin Peterson). This doesn't affect how the module is imported or used.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 1997); [backlink](#)

<http://www.voidspace.org.uk/python/articles/unittest2.shtml>  
Describes the new features, how to use them, and the  
rationale for various design decisions. (By Michael Foord.)

## Updated module: ElementTree 1.3

The version of the ElementTree library included with Python was updated to version 1.3. Some of the new features are:

- The various parsing functions now take a *parser* keyword argument giving an `:class:`~xml.etree.ElementTree.XMLParser`` instance that will be used. This makes it possible to override the file's internal encoding:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2016); [backlink](#)

Unknown interpreted text role "class".

```
p = ET.XMLParser(encoding='utf-8')
t = ET.XML("""<root/>""", parser=p)
```

Errors in parsing XML now raise a `:exc:`ParseError`` exception, whose instances have a `:attr:`position`` attribute containing a (line, column) tuple giving the location of the problem.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2023); [backlink](#)

Unknown interpreted text role "exc".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2023); [backlink](#)

Unknown interpreted text role "attr".

- ElementTree's code for converting trees to a string has been significantly reworked, making it roughly twice as fast in many cases. The `:meth:`ElementTree.write()` `<xml.etree.ElementTree.ElementTree.write>` and `:meth:`Element.write`` methods now have a *method* parameter that can be "xml" (the default), "html", or "text". HTML mode will output empty elements as `<empty></empty>` instead of `<empty/>`, and text mode will skip over elements and only output the text chunks. If you set the `:attr:`tag`` attribute of an element to `None` but leave its children in place, the element will be omitted when the tree is written out, so you don't need to do more extensive rearrangement to remove a single element.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2027); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2027);

[backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2027);  
[backlink](#)

Unknown interpreted text role "attr".

Namespace handling has also been improved. All `xmlns:<whatever>` declarations are now output on the root element, not scattered throughout the resulting XML. You can set the default namespace for a tree by setting the `attr:'default_namespace'` attribute and can register new prefixes with `meth:'~xml.etree.ElementTree.register_namespace'`. In XML mode, you can use the `true/false xml_declaration` parameter to suppress the XML declaration.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2039);  
[backlink](#)

Unknown interpreted text role "attr".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2039);  
[backlink](#)

Unknown interpreted text role "meth".

- New `:class:'~xml.etree.ElementTree.Element'` method: `meth:'~xml.etree.ElementTree.Element.extend'` appends the items from a sequence to the element's children. Elements themselves behave like sequences, so it's easy to move children from one element to another:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2047);  
[backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2047);  
[backlink](#)

Unknown interpreted text role "meth".

```
from xml.etree import ElementTree as ET

t = ET.XML("""<list>
  <item>1</item> <item>2</item> <item>3</item>
</list>""")
new = ET.XML('<root/>')
new.extend(t)

# Outputs <root><item>1</item>...</root>
print ET.tostring(new)
```

- New `:class:'Element'` method: `meth:'~xml.etree.ElementTree.Element.iter'` yields the children of the element as a generator. It's also possible to write `for child in elem:` to loop over an element's children. The existing method `meth:'getiterator'` is now deprecated, as is `meth:'getchildren'` which constructs and returns a list of children.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2064);  
[backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2064);  
[backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2064); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2064); [backlink](#)

Unknown interpreted text role "meth".

- New `:class: 'Element'` method: `:meth: ~xml.etree.ElementTree.Element.itertext` yields all chunks of text that are descendants of the element. For example:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2071); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2071); [backlink](#)

Unknown interpreted text role "meth".

```
t = ET.XML("""<list>
  <item>1</item> <item>2</item> <item>3</item>
</list>""")

# Outputs ['\n ', '1', ' ', '2', ' ', '3', '\n']
print list(t.itertext())
```

- Deprecated: using an element as a Boolean (i.e., `if elem:`) would return true if the element had any children, or false if there were no children. This behaviour is confusing -- None is false, but so is a childless element? -- so it will now trigger a `:exc: 'FutureWarning'`. In your code, you should be explicit: write `len(elem) != 0` if you're interested in the number of children, or `elem is not None`.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2082); [backlink](#)

Unknown interpreted text role "exc".

Fredrik Lundh develops ElementTree and produced the 1.3 version; you can read his article describing 1.3 at <http://effbot.org/zone/elementtree-13-intro.htm>. Florent Xicluna updated the version included with Python, after discussions on python-dev and in `:issue: '6472'`.)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2090); [backlink](#)

Unknown interpreted text role "issue".

## Build and C API Changes

Changes to Python's build process and to the C API include:

- The latest release of the GNU Debugger, GDB 7, can be [scripted using Python](#). When you begin debugging an executable program P, GDB will look for a file named `P-gdb.py` and automatically read it. Dave Malcolm contributed a `:file: 'python-gdb.py'` that adds a number of commands useful when debugging Python itself. For example, `py-up` and `py-down` go up or down one Python stack frame, which usually corresponds to several C stack frames. `py-print` prints the value of a Python variable, and `py-bt` prints the Python stack trace. (Added as a result of `:issue: '8032'`.)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2104); [backlink](#)

Unknown interpreted text role "file".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2104); [backlink](#)

Unknown interpreted text role "issue".

- If you use the `:file:`.gdbinit`` file provided with Python, the "pyo" macro in the 2.7 version now works correctly when the thread being debugged doesn't hold the GIL; the macro now acquires it before printing. (Contributed by Victor Stinner; [:issue:`3632`](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2116); [backlink](#)

Unknown interpreted text role "file".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2116); [backlink](#)

Unknown interpreted text role "issue".

- `:c:func:`Py_AddPendingCall`` is now thread-safe, letting any worker thread submit notifications to the main Python thread. This is particularly useful for asynchronous IO operations. (Contributed by Kristján Valur Jónsson; [:issue:`4293`](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2121); [backlink](#)

Unknown interpreted text role "c:func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2121); [backlink](#)

Unknown interpreted text role "issue".

- New function: `:c:func:`PyCode_NewEmpty`` creates an empty code object; only the filename, function name, and first line number are required. This is useful for extension modules that are attempting to construct a more useful traceback stack. Previously such extensions needed to call `:c:func:`PyCode_New``, which had many more arguments. (Added by Jeffrey Yasskin.)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2126); [backlink](#)

Unknown interpreted text role "c:func".

[backlink](#)

Unknown interpreted text role "c:func".

- New function: `c:func:PySys_SetArgvEx` sets the value of `sys.argv` and can optionally update `sys.path` to include the directory containing the script named by `sys.argv[0]` depending on the value of an `updatepath` parameter.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2157);**  
[backlink](#)

Unknown interpreted text role "c:func".

This function was added to close a security hole for applications that embed Python. The old function, `c:func:PySys_SetArgv`, would always update `sys.path`, and sometimes it would add the current directory. This meant that, if you ran an application embedding Python in a directory controlled by someone else, attackers could put a Trojan-horse module in the directory (say, a file named `file:os.py`) that your application would then import and run.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2162);**  
[backlink](#)

Unknown interpreted text role "c:func".

- The complicated interaction between threads and process forking has been changed. Previously, the child process created by `:func:`os.fork`` might fail because the child is created with only a single thread running, the thread performing the `:func:`os.fork``. If other threads were holding a lock, such as Python's import lock, when the fork was performed, the lock would still be marked as "held" in the new process. But in the child process nothing would ever release the lock, since the other threads weren't replicated, and the child process would no longer be able to perform imports.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2208); [backlink](#)

## Capsules

Python 3.1 adds a new C datatype, `:ctype:'PyCapsule'`, for providing a C API to an extension module. A capsule is essentially the holder of a C `void *` pointer, and is made available as a module attribute; for example, the `:mod:'socket'` module's API is exposed as `socket.CAPI`, and `:mod:'unicodedata'` exposes `ucnhash_CAPI`. Other extensions can import the module, access its dictionary to get the capsule object, and then get the `void *` pointer, which will usually point to an array of pointers to the module's various API functions.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew]2.7.rst, line 2279); [backlink](#)

Unknown interpreted text role "ctype".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew]2.7.rst, line 2279); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew]2.7.rst, line 2279); [backlink](#)

Unknown interpreted text role "mod".

There is an existing data type already used for this, `:ctype:'PyObject'`, but it doesn't provide type safety. Evil code written in pure Python could cause a segmentation fault by taking a `:ctype:'PyObject'` from module A and somehow substituting it for the `:ctype:'PyObject'` in module B. Capsules know their own name, and getting the pointer requires providing the name:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew]2.7.rst, line 2288); [backlink](#)

Unknown interpreted text role "ctype".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew]2.7.rst, line 2288); [backlink](#)

Unknown interpreted text role "ctype".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew]2.7.rst, line 2288); [backlink](#)

Unknown interpreted text role "ctype".

```
void *vtable;

if (!PyCapsule_IsValid(capsule, "mymodule.CAPI") {
    PyErr_SetString(PyExc_ValueError, "argument type invalid");
    return NULL;
}

vtable = PyCapsule_GetPointer(capsule, "mymodule.CAPI");
```

You are assured that `vtable` points to whatever you're expecting. If a different capsule was passed in, `:c:func:'PyCapsule_IsValid'` would detect the mismatched name and return false. Refer to [:ref:'using-capsules'](#) for more information on using these objects.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew]2.7.rst, line 2306); [backlink](#)

Unknown interpreted text role "c:func".

Unknown interpreted text role "ref".

Python 2.7 now uses capsules internally to provide various extension-module APIs, but the `:c:func:'PyCObject_AsVoidPtr'` was modified to handle capsules, preserving compile-time compatibility with the `:c:type:'CObject'` interface. Use of `:c:func:'PyCObject_AsVoidPtr'` will signal a `:exc:'PendingDeprecationWarning'`, which is silent by default.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]2.7.rst, line 2311); [backlink](#)

Unknown interpreted text role "issue".

## Port-Specific Changes: Mac OS X

- The path `/Library/Python/2.7/site-packages` is now appended to `sys.path`, in order to share added packages between the system installation and a user-installed copy of the same version. (Changed by Ronald Oussoren; `issue:`4865``.)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2365); [backlink](#)

Unknown interpreted text role "issue".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2370)

Unknown directive type "versionchanged".

```
.. versionchanged:: 2.7.13
```

As of 2.7.13, this change was removed.  
``/Library/Python/2.7/site-packages``, the site-packages directory used by the Apple-supplied system Python 2.7 is no longer appended to ``sys.path`` for user-installed Pythons such as from the python.org installers. As of macOS 10.12, Apple changed how the system site-packages directory is configured, which could cause installation of pip components, like setuptools, to fail. Packages installed for the system Python will no longer be shared with user-installed Pythons. (`issue:`28440``)

## Port-Specific Changes: FreeBSD

- FreeBSD 7.1's `const:`SO_SETFIB`` constant, used with `func:`~socket.getsockopt`/func:`~socket.setsockopt`` to select an alternate routing table, is now available in the `mod:`socket`` module. (Added by Kyle VanderBeek; `issue:`8235``.)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2385); [backlink](#)

[backlink](#)

Unknown interpreted text role "option".

- Another `:file:'regtest.py'` switch is `:option:'!-j'`, which takes an integer specifying how many tests run in parallel. This allows reducing the total runtime on multi-core machines. This option is compatible with several other options, including the `:option:'!-R'` switch which is known to produce long runtimes. (Added by Antoine Pitrou, [:issue:'6152'](#).) This can also be used with a new `:option:'!-F'` switch that runs selected tests in a loop until they fail. (Added by Antoine Pitrou, [:issue:'7312'](#).)

## Porting to Python 2.7

This section lists previously described changes and other bugfixes that may require changes to your code:

- The `:func:'range'` function processes its arguments more consistently; it will now call `:meth:'__int__'` on non-float, non-integer arguments that are supplied to it. (Fixed by Alexander Belopolsky; [issue:'1533'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2440); [backlink](#)

Unknown interpreted text role "func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2440); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2440); [backlink](#)

Unknown interpreted text role "issue".

- The string `:meth:'format'` method changed the default precision used for floating-point and complex numbers from 6 decimal places to 12, which matches the precision used by `:func:'str'`. (Changed by Eric Smith; [issue:'5920'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2445); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2445); [backlink](#)

Unknown interpreted text role "func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2445); [backlink](#)

Unknown interpreted text role "issue".

- Because of an optimization for the `:keyword:'with'` statement, the special methods `:meth:'__enter__'` and `:meth:'__exit__'` must belong to the object's type, and cannot be directly attached to the object's instance. This affects new-style classes (derived from `:class:'object'`) and C extension types. ([issue:'6101'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2450); [backlink](#)

Unknown interpreted text role "keyword".

Unknown interpreted text role "exc".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2468); [backlink](#)

Unknown interpreted text role "issue".

- When using `:class:`~decimal.Decimal`` instances with a string's `:meth:`format`` method, the default alignment was previously left-alignment. This has been changed to right-alignment, which might change the output of your programs. (Changed by Mark Dickinson; [issue: 6857](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2474); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2474); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2474); [backlink](#)

Unknown interpreted text role "issue".

Comparisons involving a signaling NaN value (or `sNaN`) now signal `:const:`~decimal.InvalidOperation`` instead of silently returning a true or false value depending on the comparison operator. Quiet NaN values (or `NaN`) are now hashable. (Fixed by Mark Dickinson; [issue: 7279](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2480); [backlink](#)

Unknown interpreted text role "const".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2480); [backlink](#)

Unknown interpreted text role "issue".

- The ElementTree library, `:mod:`xml.etree``, no longer escapes ampersands and angle brackets when outputting an XML processing instruction (which looks like `<?xmlstylesheet href="#style1">`) or comment (which looks like `<!-- comment -->`). (Patch by Neil Muller; [issue: 2746](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2486); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2486); [backlink](#)

Unknown interpreted text role "issue".

- The `meth:~StringIO.StringIO.readline` method of `class:~StringIO.StringIO` objects now does nothing when a negative length is requested, as other file-like objects do. ([issue:7348](#)).

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2492); [backlink](#)

Unknown interpreted text role "meth".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2492); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2492); [backlink](#)

Unknown interpreted text role "issue".

- The `mod:syslog` module will now use the value of `sys.argv[0]` as the identifier instead of the previous default value of `'python'`. (Changed by Sean Reifschneider; [issue:8451](#)).

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2496); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2496); [backlink](#)

Unknown interpreted text role "issue".

- The `mod:tarfile` module's default error handling has changed, to no longer suppress fatal errors. The default error level was previously 0, which meant that errors would only result in a message being written to the debug log, but because the debug log is not activated by default, these errors go unnoticed. The default error level is now 1, which raises an exception if there's an error. (Changed by Lars Gustäbel; [issue:7357](#)).

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2500); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2500); [backlink](#)

Unknown interpreted text role "issue".

- The `mod:urlparse` module's `func:~urlparse.urlsplit` now handles unknown URL schemes in a fashion compliant with [RFC 3986](#): if the URL is of the form `"<something>://..."`, the text before the `://` is treated as the scheme, even if it's a made-up scheme that the module doesn't know about. This change may break code that worked around the old behaviour. For example, Python 2.6.4 or 2.5 will return the following:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2508); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2508); [backlink](#)

Unknown interpreted text role "func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2516)

Unknown directive type "doctest".

```
.. doctest::
:options: +SKIP

>>> import urlparse
>>> urlparse.urlsplit('invented://host/filename?query')
('invented', '', '//host/filename?query', '', '')
```

Python 2.7 (and Python 2.6.5) will return:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2525)

Unknown directive type "doctest".

```
.. doctest::
:options: +SKIP

>>> import urlparse
>>> urlparse.urlsplit('invented://host/filename?query')
('invented', 'host', '/filename?query', '', '')
```

(Python 2.7 actually produces slightly different output, since it returns a named tuple instead of a standard tuple.)

For C extensions:

- C extensions that use integer format codes with the `PyArg_Parse*` family of functions will now raise a `:exc:'TypeError'` exception instead of triggering a `:exc:'DeprecationWarning'` (`:issue:'5080'`).

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2537); [backlink](#)

Unknown interpreted text role "exc".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2537); [backlink](#)

Unknown interpreted text role "exc".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2537); [backlink](#)

Unknown interpreted text role "issue".

- Use the new `:c:func:'PyOS_string_to_double'` function instead of the old `:c:func:'PyOS_ascii_strtod'` and `:c:func:'PyOS_ascii_atof'` functions, which are now deprecated.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2541); [backlink](#)

Unknown interpreted text role "c:func".

## New Features Added to Python 2.7 Maintenance Releases

New features may be added to Python 2.7 maintenance releases when the situation genuinely calls for it. Any such additions must go through the Python Enhancement Proposal process, and make a compelling case for why they can't be adequately addressed by either adding the new feature solely to Python 3, or else by publishing it on the Python Package Index.

In addition to the specific proposals listed below, there is a general exemption allowing new `-3` warnings to be added in any Python 2.7 maintenance release.

### Two new environment variables for debug mode

In debug mode, the `[xxx refs]` statistic is not written by default, the `:envvar:PYTHONSHOWREFCOUNT` environment variable now must also be set. (Contributed by Victor Stinner; [issue:31733](#).)

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2576);** [backlink](#)

Unknown interpreted text role "envvar".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2576);** [backlink](#)

Unknown interpreted text role "issue".

When Python is compiled with `COUNT_ALLOC` defined, allocation counts are no longer dumped by default anymore: the

`:envvar:PYTHONSHOWALLOCCOUNT` environment variable must now also be set. Moreover, allocation counts are now dumped into stderr, rather than stdout. (Contributed by Victor Stinner; [:issue:'31692'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 2.7.rst, line 2580); [backlink](#)

Unknown interpreted text role "envvar".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 2.7.rst, line 2580); [backlink](#)

Unknown interpreted text role "issue".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 2.7.rst, line 2585)

Unknown directive type "versionadded".

```
.. versionadded:: 2.7.15
```

## PEP 434: IDLE Enhancement Exception for All Branches

[PEP 434](#) describes a general exemption for changes made to the IDLE development environment shipped along with Python. This exemption makes it possible for the IDLE developers to provide a more consistent user experience across all supported versions of Python 2 and 3.

For details of any IDLE changes, refer to the NEWS file for the specific release.

## PEP 466: Network Security Enhancements for Python 2.7

[PEP 466](#) describes a number of network security enhancement proposals that have been approved for inclusion in Python 2.7 maintenance releases, with the first of those changes appearing in the Python 2.7.7 release.

[PEP 466](#) related features added in Python 2.7.7:

- `:func:'hmac.compare_digest'` was backported from Python 3 to make a timing attack resistant comparison operation available to Python 2 applications. (Contributed by Alex Gaynor; [:issue:'21306'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 2.7.rst, line 2609); [backlink](#)

Unknown interpreted text role "func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 2.7.rst, line 2609); [backlink](#)

Unknown interpreted text role "issue".

- OpenSSL 1.0.1g was upgraded in the official Windows installers published on python.org. (Contributed by Zachary Ware; [:issue:'21462'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 2.7.rst, line 2613); [backlink](#)

Unknown interpreted text role "issue".

[PEP 466](#) related features added in Python 2.7.8:

- `:func:'hashlib.pbkdf2_hmac'` was backported from Python 3 to make a hashing algorithm suitable for secure password storage broadly available to Python 2 applications. (Contributed by Alex Gaynor; [:issue:'21304'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 2.7.rst, line 2618); [backlink](#)

Unknown interpreted text role "func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2618); [backlink](#)

Unknown interpreted text role "issue".

- OpenSSL 1.0.1h was upgraded for the official Windows installers published on python.org. (contributed by Zachary Ware in [issue:21671](#) for CVE-2014-0224)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2622); [backlink](#)

Unknown interpreted text role "issue".

PEP 466 related features added in Python 2.7.9:

- Most of Python 3.4's `:mod:'ssl'` module was backported. This means `:mod:'ssl'` now supports Server Name Indication, TLS1.x settings, access to the platform certificate store, the `:class:'~ssl.SSLContext'` class, and other features. (Contributed by Alex Gaynor and David Reid; [issue:21308](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2627); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2627); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2627); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2627); [backlink](#)

Unknown interpreted text role "issue".

Refer to the "Version added: 2.7.9" notes in the module documentation for specific details.

- `:func:'os.urandom'` was changed to cache a file descriptor to `/dev/urandom` instead of reopening `/dev/urandom` on every call. (Contributed by Alex Gaynor; [issue:21305](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2635); [backlink](#)

Unknown interpreted text role "func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 2.7.rst, line 2635); [backlink](#)

Unknown interpreted text role "issue".

- `:data:'hashlib.algorithms_guaranteed'` and `:data:'hashlib.algorithms_available'` were backported from Python 3 to make it easier for Python 2 applications to select the strongest available hash algorithm. (Contributed by Alex Gaynor in

:issue:'21307')

## PEP 477: Backport ensurepip (PEP 453) to Python 2.7

PEP 477 approves the inclusion of the PEP 453 ensurepip module and the improved documentation that was enabled by it in the Python 2.7 maintenance releases, appearing first in the Python 2.7.9 release.

### Bootstrapping pip By Default

The new `mod:'ensurepip'` module (defined in PEP 453) provides a standard cross-platform mechanism to bootstrap the pip installer into Python installations. The version of `pip` included with Python 2.7.9 is `pip 1.5.6`, and future 2.7.x maintenance releases will update the bundled version to the latest version of `pip` that is available at the time of creating the release candidate.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew]2.7.rst, line 2656); [backlink](#)

Unknown interpreted text role "mod".

By default, the commands `pip`, `pipX` and `pipX.Y` will be installed on all platforms (where X.Y stands for the version of the Python installation), along with the `pip` Python package and its dependencies.

For CPython `ref'source builds on POSIX systems <building-python-on-unix>`, the `make install` and `make altinstall` commands do not bootstrap `pip` by default. This behaviour can be controlled through configure options, and overridden through Makefile options.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew]2.7.rst, line 2667); [backlink](#)

Unknown interpreted text role "ref".

On Windows and Mac OS X, the CPython installers now default to installing `pip` along with CPython itself (users may opt out of installing it during the installation process). Window users will need to opt in to the automatic `PATH` modifications to have `pip` available from the command line by default, otherwise it can still be accessed through the Python launcher for Windows as `py -m pip`.

As [discussed in the PEP](#), platform packagers may choose not to install these commands by default, as long as, when invoked, they provide clear and simple directions on how to install them on that platform (usually using the system package manager).

### Documentation Changes

As part of this change, the `ref'installing-index'` and `ref'distributing-index'` sections of the documentation have been completely redesigned as short getting started and FAQ documents. Most packaging documentation has now been moved out to the Python Packaging Authority maintained [Python Packaging User Guide](#) and the documentation of the individual projects.

## PEP 476: Enabling certificate verification by default for stdlib http clients

PEP 476 updated `mod:httplib` and modules which use it, such as `mod:urllib2` and `mod:xmlrpclib`, to now verify that the server presents a certificate which is signed by a Certificate Authority in the platform trust store and whose hostname matches the hostname being requested by default, significantly improving security for many applications. This change was made in the Python 2.7.9 release.

For applications which require the old previous behavior, they can pass an alternate context:

```
import urllib2
import ssl

# This disables all verification
context = ssl._create_unverified_context()

# This allows using a specific certificate for the host, which doesn't need
# to be in the trust store
context = ssl.create_default_context(cafile="/path/to/file.crt")

urllib2.urlopen("https://invalid-cert", context=context)
```

## PEP 493: HTTPS verification migration tools for Python 2.7

PEP 493 provides additional migration tools to support a more incremental infrastructure upgrade process for environments containing applications and services relying on the historically permissive processing of server certificates when establishing client HTTPS connections. These additions were made in the Python 2.7.12 release.

These tools are intended for use in cases where affected applications and services can't be modified to explicitly pass a more permissive SSL context when establishing the connection.

For applications and services which can't be modified at all, the new `PYTHONHTTPSVERIFY` environment variable may be set to 0 to revert an entire Python process back to the default permissive behaviour of Python 2.7.8 and earlier.

For cases where the connection establishment code can't be modified, but the overall application can be, the new `:func:'ssl_https_verify_certificates'` function can be used to adjust the default behaviour at runtime.

## New `make regen-all` build target

To simplify cross-compilation, and to ensure that CPython can reliably be compiled without requiring an existing version of Python to already be available, the autotools-based build system no longer attempts to implicitly recompile generated files based on file modification times.

Instead, a new `make regen-all` command has been added to force regeneration of these files when desired (e.g. after an initial version of Python has already been built based on the pregenerated versions).

More selective regeneration targets are also defined - see `:source:'Makefile.pre.in'` for details.

## Removal of `make touch` build target

The `make touch` build target previously used to request implicit regeneration of generated files by updating their modification times has been removed.

It has been replaced by the new `make regen-all` target.
