

Nanoc plugin

This plugin adds some aliases and autocompletion for common [Nanoc](#) commands.

To use it, add `nanoc` to the plugins array in your `zshrc` file:

```
plugins=(... nanoc)
```

Aliases

Alias	Command	Description
n	nanoc	Main Nanoc command
nco	nanoc compile	Compile all items of the current site
nCS	nanoc create-site	Create a new site at the given path. The site will use the filesystem data source
nd	nanoc deploy	Deploy the compiled site to the destination (specified with <code>--target</code>)
np	nanoc prune	Remove files not managed by Nanoc from the output directory
nv	nanoc view	Start the static web server (on port 3000 and all IP addresses, unless specified)
