

## EventEmitter.emit() method

Emit an event and call any associated listeners.

**Signature:**

```
emit(event: EventType, eventData?: unknown): boolean;
```

### Parameters

Parameter	Type	Description
event	<a href="#">EventType</a>	the event you'd like to emit
eventData	unknown	any data you'd like to emit with the event

**Returns:**

boolean

`true` if there are any listeners, `false` if there are not.
