

Home > puppeteer > Frame > setContent

Frame.setContent() method

Set the content of the frame.

Signature:

```
setContent(html: string, options?: {  
    timeout?: number;  
    waitUntil?: PuppeteerLifecycleEvent | PuppeteerLifecycleEvent[];  
}): Promise<void>;
```

Parameters

Parameter	Type	Description
html	string	HTML markup to assign to the page.
options	{ timeout?: number; waitUntil?: PuppeteerLifecycleEvent PuppeteerLifecycleEvent[]; }	options to configure how long before timing out and at what point to consider the content setting successful.

Returns:

Promise<void>
