

## circbuf

This repository provides the `circbuf` package. This provides a `Buffer` object which is a circular (or ring) buffer. It has a fixed size, but can be written to infinitely. Only the last `size` bytes are ever retained. The buffer implements the `io.Writer` interface.

## Documentation

Full documentation can be found on [Godoc](#)

## Usage

The `circbuf` package is very easy to use:

```
buf, _ := NewBuffer(6)
buf.Write([]byte("hello world"))

if string(buf.Bytes()) != " world" {
    panic("should only have last 6 bytes!")
}
```
