

entryComponents migration

As of Angular version 13, the `entryComponents` option in `@NgModule` and `@Component` isn't necessary anymore. This migration will automatically remove any usages.

Before

```
import { NgModule, Component } from '@angular/core';

@Component({selector: 'my-comp', template: ''})
export class MyComp {}

@NgModule({
  declarations: [MyComp],
  entryComponents: [MyComp],
  exports: [MyComp]
})
export class MyModule {}
```

After

```
import { NgModule, Component } from '@angular/core';

@Component({selector: 'my-comp', template: ''})
export class MyComp {}

@NgModule({
  declarations: [MyComp],
  exports: [MyComp]
})
export class MyModule {}
```
