

theme-seti

This is an icon theme that uses the icons from `seti-ui`.

Previewing icons

There is a `./icons/preview.html` file that can be opened to see all of the icons included in the theme. To view this, it needs to be hosted by a web server. The easiest way is to open the file with the **Open with Live Server** command from the Live Server extension.

Updating icons

- Make a PR against <https://github.com/jesseweed/seti-ui> with your icon changes.
- Once accepted there, ping us or make a PR yourself that updates the theme and font here

To adopt the latest changes from <https://github.com/jesseweed/seti-ui>:

- have the main branches of <https://github.com/jesseweed/seti-ui> and <https://github.com/microsoft/vscode> cloned in the same parent folder
- in the `seti-ui` folder, run `npm install` and `npm run prepublishOnly`. This will generate updated icons and fonts.
- in the `vscode/extensions/theme-seti` folder run `npm run update`. This will launch the icon theme update script that updates the theme as well as the font based on content in `seti-ui`.
- to test the icon theme, look at the icon preview as described above.
- when done, create a PR with the changes in <https://github.com/microsoft/vscode>. Add a screenshot of the preview page to accompany it.

Languages not shipped with vscode

Languages that are not shipped with `vscode` must be added to the `nonBuiltInLanguages` object inside of `update-icon-theme.js`.

These should match the file mapping in `seti-ui`.

Please try and keep this list in alphabetical order! Thank you.
