

A statically generated blog example using Next.js and Drupal

This example showcases Next.js's [Static Generation](#) feature using [Drupal](#) as the data source.

Demo

<https://cms-drupal.vercel.app>

Deploy your own

Once you have [configured the Next.js module for Drupal](#) and have access to the environment variables you'll need, deploy the example using [Vercel](#):

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example cms-drupal cms-drupal-app
# or
yarn create next-app --example cms-drupal cms-drupal-app
# or
pnpm create next-app -- --example cms-drupal cms-drupal-app
```

Setup Drupal

See the Get Started guide [here](#).

Deploy from Our Template

Alternatively, you can deploy using our template by clicking on the Deploy button below.
