

Working with network connection options

Network modules can support multiple connection protocols, such as `ansible.netcommon.network_cli`, `ansible.netcommon.netconf`, and `ansible.netcommon.httpapi`. These connections include some common options you can set to control how the connection to your network device behaves.

Common options are:

- `become` and `become_method` as described in [ref: 'privilege_escalation'](#).

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\network\getting_started\ (ansible-devel) (docs) (docsite) (rst) (network) (getting_started)network_connection_options.rst, line 11); [backlink](#)

Unknown interpreted text role "ref".

- `network_os` - set to match your network platform you are communicating with. See the [ref: platform-specific <platform_options>](#) pages.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\network\getting_started\ (ansible-devel) (docs) (docsite) (rst) (network) (getting_started)network_connection_options.rst, line 12); [backlink](#)

Unknown interpreted text role "ref".

- `remote_user` as described in [ref: 'connection_set_user'](#).

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\network\getting_started\ (ansible-devel) (docs) (docsite) (rst) (network) (getting_started)network_connection_options.rst, line 13); [backlink](#)

Unknown interpreted text role "ref".

- Timeout options - `persistent_command_timeout`, `persistent_connect_timeout`, and `timeout`.

Setting timeout options

When communicating with a remote device, you have control over how long Ansible maintains the connection to that device, as well as how long Ansible waits for a command to complete on that device. Each of these options can be set as variables in your playbook files, environment variables, or settings in your [ref: ansible.cfg file <ansible_configuration_settings>](#).

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\network\getting_started\ (ansible-devel) (docs) (docsite) (rst) (network) (getting_started)network_connection_options.rst, line 21); [backlink](#)

Unknown interpreted text role "ref".

For example, the three options for controlling the connection timeout are as follows.

Using vars (per task):

```
- name: save running-config
  cisco.ios.ios_command:
    commands: copy running-config startup-config
  vars:
    ansible_command_timeout: 30
```

Using the environment variable:

```
$export ANSIBLE_PERSISTENT_COMMAND_TIMEOUT=30
```

Using the global configuration (in [file: 'ansible.cfg'](#))

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\ansible-

devel\docs\docsite\rst\network\getting_started\ (ansible-devel) (docs) (docsite) (rst)
(network) (getting_started)network_connection_options.rst, line 41); [backlink](#)

Unknown interpreted text role "file".

```
[persistent_connection ]  
command_timeout = 30
```

See [ref:'ansible_variable_precedence'](#) for details on the relative precedence of each of these variables. See the individual connection type to understand each option.
