

Duplicate Sass Dependencies

Why This Error Occurred

Your project has a direct dependency on both `sass` and `node-sass`, two different packages that both compile Sass files!

Next.js will only use one of these, so it is suggested you remove one or the other.

Possible Ways to Fix It

The `sass` package is a modern implementation of Sass in JavaScript that supports all the new features and does not require any native dependencies.

Since `sass` is now the canonical implementation, we suggest removing the older `node-sass` package, which should speed up your builds and project install time.

Via npm

```
npm uninstall node-sass
```

Via Yarn

```
yarn remove node-sass
```
