

Shadows

Contents

Examples	1
Sass	1
Variables	1
Utilities API	1

Examples

While shadows on components are disabled by default in Bootstrap and can be enabled via `$enable-shadows`, you can also quickly add or remove a shadow with our `box-shadow` utility classes. Includes support for `.shadow-none` and three default sizes (which have associated variables to match).

```
{{< example >}}
```

No shadow

Small shadow

Regular shadow

Larger shadow

```
{{< /example >}}
```

Sass

Variables

```
{{< scss-docs name="box-shadow-variables" file="scss/_variables.scss" >}}
```

Utilities API

Shadow utilities are declared in our utilities API in `scss/_utilities.scss`.
[Learn how to use the utilities API.]({{< docsref "/utilities/api#using-the-api" >}})

```
{{< scss-docs name="utils-shadow" file="scss/_utilities.scss" >}}
```
