

How it works

Vertical rules are inspired by the `<hr>` element, allowing you to create vertical dividers in common layouts. They're styled just like `<hr>` elements:

- They're `1px` wide
- They have `min-height` of `1em`
- Their color is set via `currentColor` and `opacity`

Customize them with additional styles as needed.

Example

```
{{< example >}}
```

```
{{< /example >}}
```

Vertical rules scale their height in flex layouts:

```
{{< example >}}
```

```
{{< /example >}}
```

With stacks

They can also be used in `[stacks]`[\({{< docsref "/helpers/stacks" >}}\)](/helpers/stacks):

```
{{< example >}}
```

First item

Second item

Third item

```
{{< /example >}}
```
