

## zh-CN

使用 `separator=">"` 可以自定义分隔符。

## en-US

The separator can be customized by setting the separator property: `separator=">"` .

```
import { Breadcrumb } from 'antd';

export default () => (
  <Breadcrumb separator=">">
    <Breadcrumb.Item>Home</Breadcrumb.Item>
    <Breadcrumb.Item href="">Application Center</Breadcrumb.Item>
    <Breadcrumb.Item href="">Application List</Breadcrumb.Item>
    <Breadcrumb.Item>An Application</Breadcrumb.Item>
  </Breadcrumb>
);
```
