

gatsby-plugin-styled-components

A Gatsby plugin for styled-components with built-in server-side rendering support.

Install

```
npm install gatsby-plugin-styled-components styled-components
babel-plugin-styled-components
```

How to use

Edit `gatsby-config.js`

```
module.exports = {
  plugins: [
    {
      resolve: `gatsby-plugin-styled-components`,
      options: {
        // Add any options here
      },
    },
  ],
}
```

Options

You can pass options to the plugin, see the [Styled Components docs](#) for a full list of options.

For example, to disable the `displayName` option:

```
options: {
  displayName: false
}
```

Note: The `ssr` option will be ignored. Gatsby will apply it automatically when needed.

Disabling vendor prefixing

If you don't require vendor prefixes for adding legacy CSS properties then this can be disabled by supplying the `disableVendorPrefixes` option:

```
options: {
  disableVendorPrefixes: true
}
```
