

Home > puppeteer > HTTPRequest > abort

HTTPRequest.abort() method

Aborts a request.

Signature:

```
abort(errorCode?: ErrorCode, priority?: number): Promise<void>;
```

Parameters

Parameter	Type	Description
errorCode	ErrorCode	optional error code to provide.
priority	number	If provided, intercept is resolved using cooperative handling rules. Otherwise, intercept is resolved immediately.

Returns:

Promise<void>

Remarks

To use this, request interception should be enabled with `Page.setRequestInterception()`. If it is not enabled, this method will throw an exception immediately.
