

- Q: I got encoding issues on Windows.
- A: Change your Windows code page to UTF-8, using `chcp 65001` .
- Q: I don't know how to install it on Windows.
- A: Then don't do it. Just put your `you-get` folder into system `%PATH%` .
- Q: I got something like `UnicodeDecodeError: 'gbk' codec can't decode byte 0xb0 in position 1012: illegal multibyte sequence` .
- A: Run `set PYTHONIOENCODING=utf-8` .
- Q: Special characters in the URL (such as `?` , `&`) are interpreted by my shell. How to prevent this?
- A: Use `noglob` .
- Q: UnicodeDecodeError in Windows mintty (such as cygwin, [git-for-windows](#), [msys2](#) and [git-sdk](#))
- A:
 - Find a folder called site-packages under python3, for example:
 - `$ python3`
 - `>>> import site; site.getsitepackages()`
 - It should print something like `['C:/git-sdk-64/mingw64/lib/python3.5/site-packages']`
 - Create a new file `sitecustomize.py`
 - `import sys`
 - `sys.stdout = open(sys.stdout.fileno(), mode='w', encoding='utf8', buffering=1)`
 - Save it to `C:/git-sdk-64/mingw64/lib/python3.5/site-packages/sitecustomize.py`
- Q: 'width' 'height' 'auto' not exist?
- A: Please quote the URL. This is a bug from the implementation of the Bash.
- Q: I got `ssl.SSLError: [SSL: CERTIFICATE_VERIFY_FAILED] certificate verify failed`?
- A: Kindly refer to #1710 .

汉语最后翻译日期: 2017年11月04日

- Q: Windows下编码问题。
- A: 使用UTF-8编码, using `chcp 65001` .

- Q: 不知道怎么在Windows下安装.
- A: 那就别安了, 把 `you-get` 目录放进系统 `%PATH%` .
- Q: `UnicodeDecodeError: 'gbk' codec can't decode byte 0xb0 in position 1012: illegal multibyte sequence` .
- A: 执行 `set PYTHONIOENCODING=utf-8` .
- Q: 命令行下, URL有些特殊字符被执行了(例如 `?` , `&`)。如何避免?
- A: 使用 `noglob` .
- Q: 在 Windows mintty 遇到 `UnicodeDecodeError` (例如: [cygwin](#), [git-for-windows](#), [msys2](#) 以及 [git-sdk](#))
- A:
 - 在python3目錄底下找到一個叫 `site-packages` 的目錄, 例如:
 - `$ python3`
 - `>>> import site; site.getsitepackages()`
 - 這時應該會顯示類似這樣的輸出 `['C:/git-sdk-64/mingw64/lib/python3.5/site-packages']`
 - 創建一個檔案 `sitecustomize.py`
 - `import sys`
 - `sys.stdout = open(sys.stdout.fileno(), mode='w', encoding='utf8', buffering=1)`
 - 將它存到 `C:/git-sdk-64/mingw64/lib/python3.5/site-packages/sitecustomize.py`
- Q: 'width' 'height' 'auto' 不存在?
- A: 请对URL加引号。
- Q: macOS下出现 `ssl.SSLError: [SSL: CERTIFICATE_VERIFY_FAILED] certificate verify failed`?
- A: 看 #1710 .
