

Sharp Version Does Not Support AVIF

Why This Error Occurred

The `next/image` component's default loader uses [sharp](#) if its installed.

You are seeing this error because you have an outdated version of [sharp](#) installed that does not support the AVIF image format.

AVIF support was added to [sharp](#) in version 0.27.0 (December 2020) so your installed version is likely older.

Possible Ways to Fix It

- Install the latest version of `sharp` by running `yarn add sharp@latest` in your project directory
- If you're using the `NEXT_SHARP_PATH` environment variable, then update the `sharp` install referenced in that path, for example `cd "$NEXT_SHARP_PATH/.." && yarn add sharp@latest`
- If you cannot upgrade `sharp`, you can instead disable AVIF by configuring [formats](#) in your `next.config.js`

After choosing an option above, reboot the server by running either `next dev` or `next start` for development or production respectively.

Note: This is not necessary for Vercel deployments, since `sharp` is installed automatically for you.
