

mix-fast

Fast mix autocompletion plugin.

This script caches the output for later usage and significantly speeds it up. It generates a `.mix_tasks` cache file for current project. Currently if you want to update cache you should remove `.mix_tasks` file

Inspired by and based on rake-fast zsh plugin.

This is entirely based on this pull request by Ullrich Schäfer, which is inspired by this Ruby on Rails trick from 2006.

Installation

Just add the plugin to your `.zshrc`:

```
plugins=(foo bar mix-fast)
```

You might consider adding `.mix_tasks` to your global `.gitignore`

Usage

`mix`, then press tab
