

Page.waitForRequest() method

Signature:

```
waitForRequest(urlOrPredicate: string | ((req: HTTPRequest) => boolean | Promise<boolean>), options?: {
  timeout?: number;
}): Promise<HTTPRequest>;
```

Parameters

Parameter	Type	Description
urlOrPredicate	string ((req: HTTPRequest) => boolean Promise<boolean>)	A URL or predicate to wait for
options	{ timeout?: number; }	Optional waiting parameters

Returns:

Promise<[HTTPRequest](#)>

Promise which resolves to the matched response

Remarks

Optional Waiting Parameters have:

- `timeout`: Maximum wait time in milliseconds, defaults to `30` seconds, pass `0` to disable the timeout. The default value can be changed by using the [Page.setDefaultTimeout\(\)](#) method.

Example

```
const firstResponse = await page.waitForResponse(
  'https://example.com/resource'
);
const finalResponse = await page.waitForResponse(
  (response) =>
    response.url() === 'https://example.com' && response.status() === 200
);
const finalResponse = await page.waitForResponse(async (response) => {
  return (await response.text()).includes('<html>');
});
return finalResponse.ok();
```
