

Working with Starters

Starters are boilerplate Gatsby sites maintained officially, or by the community.

Prerequisites

- The Gatsby CLI installed

Directions

1. Find the starter you'd like to use. (*The Starter Library is a good place to look!*)
2. Generate a new site based on the starter. In the terminal, run:

```
gatsby new {your-project-name} {link-to-starter}
```

Don't run the above command as-is – remember to replace {your-project-name} and {link-to-starter}!

3. Run your new site:

```
cd {your-project-name}  
gatsby develop
```

Additional resources
