

Earlier this month, I had the privilege of appearing on [The Changelog](#), a podcast about software development. We had a fun (for me) and wide-ranging conversation:

- life as a coder inside a newsroom
- the big compilers-as-frameworks trend
- scalability
- the [Great Divide](#)

...and, most importantly, Svelte 3.

Unless you hang out in our [Discord server](#) or follow [@sveltejs](#) on Twitter, you might not know that Svelte 3 is just around the corner, and it's going to be a huge release. We've rethought the developer experience from the ground up, and while it *will* be a nuisance if you need to upgrade a Svelte 2 app (more on that soon) we think you're going to love it.

On the podcast [Adam](#), [Jerod](#) and I talk about some of the changes and why we're making them. You can listen here or on the [podcast page](#).

[The Changelog 332: A UI framework without the framework](#) – Listen on [Changelog.com](#)
