

Attempt was made to import an unimportable value. This can happen when trying to import a method from a trait.

Erroneous code example:

```
mod foo {  
    pub trait MyTrait {  
        fn do_something();  
    }  
}  
  
use foo::MyTrait::do_something;  
// error: `do_something` is not directly importable  
  
fn main() {}
```

It's invalid to directly import methods belonging to a trait or concrete type.
