

## Colored links

You can use the `.link-*` classes to colorize links. Unlike the `[.text-*` classes]([{{< docsref "/utilities/colors" >}}](/utilities/colors)), these classes have a `:hover` and `:focus` state.

```
{{< example >}} {{< colored-links.inline >}} {{- range (index $.Site.Data
"theme-colors") }} {{ .name | title }} link {{- end -}} {{< /colored-links.inline
>}} {{< /example >}}
```

{{< callout info >}} Some of the link styles use a relatively light foreground color, and should only be used on a dark background in order to have sufficient contrast. {{< /callout >}}
